

Flex Link Blaster Cable Quick Start

Global Caché is lessening our carbon footprint by reducing our paper output. For complete documentation and tutorials, visit:

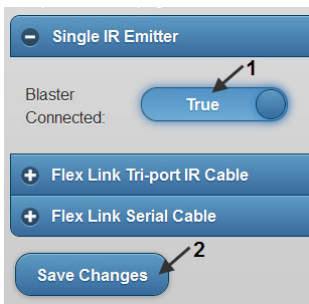

www.globalcache.com/docs

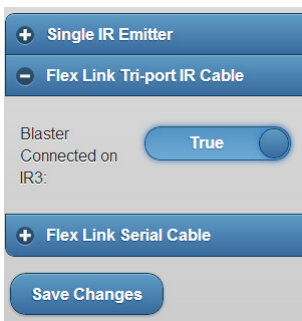

Getting Started. Once the iTach Flex is connected to the network by either an Ethernet cable or WiFi, plug the Flex Link Blaster cable directly into the Flex Link Port or into the Tri-port IR3 port.

To configure Blaster cable functionality, right click on the unit entry in **iHelp*** and click configure. A web browser will present the web configuration pages of the Flex. To access the set up pages manually, type in the unit's IP address. Flex units in default will reside at the default address of **http://192.168.1.70**. To use the Blaster cable directly, on the "Flex Link Port Configuration" page, select "Single IR Emitter," change the **Blaster Connected** setting to **True**, and select **Save Changes** to apply the new settings.

To use the Blaster cable with the Flex Link Tri-port cable, plug it into the port labeled IR3, select “Flex Link Tri-port Cable,” and select **True** for the **Blaster Connected on IR3** setting. **Save Changes** to apply new settings.

Please note the Blaster cable is designed to be used with Global Caché iTach Flex products to transmit IR signals across a room up to 35 feet. The IR modulation frequency 20 to 500 KHz

Troubleshooting. See the iTach Flex Quick Starts or visit our website for more information on configuring Flex devices.

*To download the **iHelp** application visit **www.globalcache.com/downloads**. Run iHelp on a Windows PC that is connected to your network.

This device complies with Part 15 of FCC rules and with ICES-003 of Industry Canada. Operation is subject to the following two conditions:

- (1) This device may not cause harmful interference, and
- (2) This device must accept any interference
