

Hacker Gifts: A Unique Digital Gifts Service

~ Creates digital puzzles for enthusiastic programmers and aspiring hackers

~ Hackers love digital puzzles because they pose a challenge to them

~ Your loved ones will remember such innovative gifts

November 25, 2019: Is your spouse a programmer or a hacker? Or, are you a good friend of sophomore computer science student? If yes, chances are high that you're already wondering what to gift them now that the Christmas countdown has begun. Needless to say, you don't want to give a run-of-the-mill gift, which will let both of you down.

Your wait for an innovative present is over, as Hacker Gifts (<https://hacker.gifts/>) is making waves for creating unique digital gifts—programming puzzles, which your loved one is definitely going to like.

Started by a Senior Software Engineer at Facebook, Hacker Gifts knows its target segment of passionate programmers really well. It is also aware of a huge gap in the market, where most gifts targeted at computer geeks are just plain silly.

Hacker Gifts makes unique, immersive and memorable, like hacker-in-the-movies experiences. The digital gift consists of a chain of clever programming puzzles, with one puzzle leading to another and so on and so forth.

Once you place an order, you will receive a digital file, which will have a unique image with your spouse's or friend's name and the clue to the first puzzle. Your hidden message will be revealed to them when he or she solves all the puzzles.

These puzzles are an ideal of mix of fun and challenge. Your loved one will definitely feel the adrenaline rush receiving such a gift. Surely, it would be one-of-a-kind-gift. At Hacker Gifts, the founder understands that geeks and programmers don't like products, accessories or apparels as gifts. Rather, they crave for interesting and stimulating experiences.

“The best gift is a unique memorable experience,” says the Founder of Hacker Gifts.
