### Operate Step:

1. Press the button, light on (red light), press again, light off.
2. Press again, light on (blue light), press again, light off.
3. Repeat the 2 steps above to choose other 5 different individual colors.
4. Press again, the final color is multicolor, color changing automatically by flash and fade.

\*Memory function: It can remember your last setting.

\*6 Hours Timer: it will automatically turn off after 6 hours running.

## How to Use Hook

Press the hook to make it contractive to fix the hole on the bottom of the light, release it, done.

## How to Change Batteries

1. Use the T screwdriver to screw off the battery lid.

2. Use the + screwdriver to screw off the PCB board,

3. Turn over the battery lid to take out the batteries.

4. Install new batteries. (let the cathode(-) outward)

5. Install the PCB board, align the spring with the batteries, and let all the components be in the right position.

6. Screw up the PCB board.

7. Tighten the battery lid until it cannot be twisted anymore, to make it fully waterproof. **(Very Important! )**

## Attentions

1. Please make sure the sealing ring is in the correct position.

2. Please try your best to screw up until the cap can not be twisted any further, to make it fully waterproof before putting it into water.

3. It's better not use in hot water, because the vapour may go into the light, it will damage the components and lead to stop working.

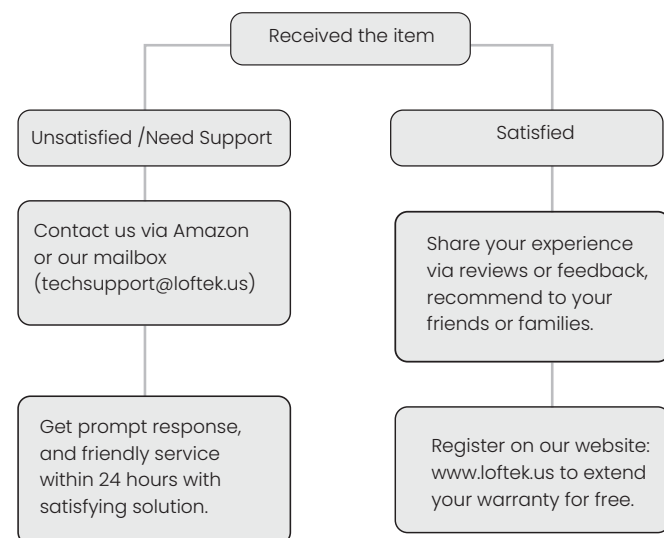

4. When the light become very weak, it means the light will be out of power soon, please change new batteries.

5. If you don't plan to use for following long time, please remove batteries, it will help save battery energy and protect led bulb.
