

APERION'S INTIMUS SERIES 533-PT power tower speaker

SPECIFICATIONS

Frequency response:

30hz to 20Khz

Nominal speaker impedance:

8 ohms

Recommended power:

50-300 watts

Speaker enclosure type:

2-Way Vented With

Powered Sub, Video Shielded

Tweeter (diameter):

7.11

Woofer (diameter):

5.25"

Subwoofer (diameter):

8"

Amplifier power:

150 Watts (RMS)

Dimensions (HxWxD):

41-1/2" X 9-3/4" X 12-1/2"

Weight:

57 pounds

Warranty:

10 years on speaker.

3 years on subwoofer amplifier.

FEATURES

Power Tower Design: The 533-PT merges the lush imaging of our 532 bookshelf speakers and the full-bodied bass response of our S8-APR subwoofer into one powerful package. Designed to be used as a full range speaker for both home theater and music applications, the 150 watt powered subwoofers are built right into the base of each tower. The 533-PT gives you the choice to eliminate a stand alone sub or to add another sub if you plan on waking your neighbors in the next county.

1" Audiophile-Grade Silk-Dome Tweeter: A silk diaphragm means that this speaker sings. Silk gives remarkable detail, but also plays smooth and natural. Our audiophile-grade 1-inch tweeter features ferrofluid cooling for high power handling and smooth response and a high quality heat sink, which means less distortion. Along with magnetic shielding, and a linear response faceplate for better horizontal dispersion, this tweeter is the high point of the speaker. Literally.

Custom PVA- Damped 5.25" Midrange: Our custom 5.25" midrange-woofer is the heart and soul of our 532-PT power tower. The cone is made of paper that's been treated with Poly Vinyl Acetate (PVA). Paper gives a super fast and natural response, while the PVA helps make it more rigid and longer-lasting. The magnetically shielded driver sports a solid polymer frame, heavy rubber surround, super flat frequency response, and a deep commitment to keep you amazed for years to come.

Custom Poly 8" Subwoofer: Our ultra-fast custom 8" polypropylene woofer was designed with superior high-excursion performance in mind. It features an anti-resonant stamped-steel frame, heavy-duty butyl rubber surround, and is magnetically shielded. Be prepared for an unbelievably smooth and natural sound with super-tight bass, all from an unassuming and beautiful little woofer.

150-watt High Power Amp: With 150 watts of continuous class A/B power, the 533-PT has guts enough to fill most home theaters. And with a specially designed HD-X³ crossover, a seamless and smooth frequency response is found throughout the bass, mid-bass, and mid-range regions. A notched volume control dial allows for easy adjustment of subwoofer volume, so you can get the bass level just right. Speaker level inputs with 5-way gold plated binding posts make setup a snap and a detachable power cord and 110/220 voltage switch allows the 533-PT to be used all over the world.

HD-X³ Impedance Leveling Crossover Technology: Patent pending HD-X³ crossover technology levels the impedance load across the entire frequency range creating a remarkably flat frequency response and eliminates the detrimental effects of resistance introduced by long runs of speaker wire.

Anti-Resonant Cabinet: Each 533-PT speaker is made of rock solid 1" thick High Density Fiberboard (HDF) to eliminate unwanted resonances within the cabinet. For tighter bass and better midrange performance, two sound-proof chambers separate the subwoofer from the 5.25" driver and 1" tweeter. Each speaker is finished in either real cherry wood or high gloss black lacquer finish. This first-rate cabinetry unites the acoustic-damping qualities of only the most expensive loudspeakers with a furniture-grade finish so handsome your coffee table will be jealous.

Magnetically Shielded: All three drivers in our 533-PT have been magnetically shielded for placement near a video monitor.

5-Way Binding Posts: Each 533-PT power tower is provided with five-way binding posts that allow you total flexibility in connecting your speaker wires. They willingly accept banana plugs (4mm), spades (3/8"), pins or bare wire.

Floor Spikes and Footers: Included with each power tower is a set of brass floor spikes and footers. The spikes raise the tower off the floor, giving you tighter bass by de-coupling the cabinet from the floor. Footers can be added for hard-floor surfaces so the spikes won't scratch your floors.

Acoustically Transparent Grille: An acoustically transparent grille is included with each speaker. We designed a grille that looks great and protects the precious drivers from inquisitive kids and pets. And since the grille cloth is sonically invisible, your speakers' performance won't be compromised.

30-Day No Risk Audition + Free Shipping = Absolutely Nothing To Lose: We are so joyfully confident in the sound, looks and price of our speakers, if you are not wholeheartedly satisfied, just return the speakers within 30 days. We'll refund your money in full, pay the return shipping fee, and all with a no sweat smile.
