Due to continued product improvement, the products illustrated/photographed in this guide may vary slightly from the actual product.

Key Features

- Easy to Use - Fully automatic operation.
- Large Grinding Burrs - Provide faster; more efficient operation.
- Highly Accurate and Consistent Throw - For even distribution, dust reduction.
- Constant, uniform grind.
- Powerful 1/2 hp Motor - Equipped with safety circuit breaker.

Specifications (Selected Models)

Symbols

This is the safety alert symbol. It is used to alert you to potential physical injury hazards. Obey all safety messages that follow this symbol to avoid possible injury or death.

DANGER - Indicates a hazardous situation which, if not avoided, will result in death or serious injury.

WARNING - Indicates a hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION - Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.

NOTICE - Indicates a situation which, if not avoided, could result in property damage.

IMPORTANT - Provides information and tips for proper operation.

SANITATION REQUIREMENTS

WARNING - This product can expose you to chemicals including Acrylamide and Bisphenol A (BPA), which are known to the State of California to cause cancer and birth defects or other reproductive harm. For more information visit www.P65Warnings.ca.gov.

Important Safeguards/Conventions

WARNING:

- Make sure that this appliance is installed and grounded according to the INSTALLATION INSTRUCTIONS by qualified personnel before attempting to use it. Failure to follow the INSTALLATION INSTRUCTIONS could result in personal injury or void the warranty.
- This appliance is designed for commercial use. Any service other than cleaning and preventive maintenance should be performed by an authorized Wilbur Curtis service technician.
- To reduce the risk of fire or electric shock, DO NOT open the service panels. There are no user serviceable parts inside.
- Clean the appliance completely before using it for the first time, according to the CLEANING INSTRUCTIONS. Clean it regularly as instructed in the CLEANING INSTRUCTIONS.
- Use this appliance only for its intended use, grinding coffee.
- This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety. Children should be supervised to ensure that they do not play with the appliance.
- Avoid spillage onto the power (mains) connector.

CE Requirements

- This appliance must be installed in locations where it can be overseen by trained personnel.
- For proper operation, this appliance must be installed where the temperature is between 5°C to 35°C.
- Appliance shall not be tilted more than 10° for safe operation.
- An electrician must provide electrical service as specified in conformance with all local and national codes. For safe use, an all-pole disconnection must be incorporated into the fixed wiring in accordance with the wiring rules outlined in clause 7.12.2 of IEC 6.335-1 for meeting the minimum electrical safety of this standard.
- This appliance must not be cleaned by water jet.
- This appliance can be used by persons aged from 18 years and above if they have been given supervision or instruction concerning use of the appliance in a safe way and if they understand the hazards involved.
- Keep the appliance and its cord out of reach of children aged less than 18 years.
- Appliances can be used by persons 18 years and above with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning use of the appliance in a safe way and understand the hazards involved.
- Children under the age of 18 years should be supervised to ensure they do not play with the appliance.
- If the power cord is ever damaged, it must be replaced by the manufacturer or authorized service personnel with a special cord available from the manufacturer or its authorized service personnel in order to avoid a hazard.
- Machine must not be immersed for cleaning.
- Cleaning and user maintenance shall not be made by children unless they are older than 18 years and supervised.
- This appliance is intended to be used in household and similar applications such as:
 - staff kitchen areas in shops, offices and other working environments;
 - by clients in hotels, motels and other residential type environments;
 - bed and breakfast type environments.
- This appliance not intended to be used in applications such as:
 - farm houses
- Access to the service areas permitted by Authorized Service personnel only.
- The A-Weighted sound pressure level is below 70 dBA.

WARNING: Installation is to be performed only by a qualified installer.

WARNING: Improper electrical connection may result in an electric shock hazard. This grinder must be properly grounded.

IMPORTANT: Observe all governing codes and ordinances.

Installation Instructions

Installation Requirements

- A secure surface capable of supporting the weight of the appliance.
- For units without an attached cord set: Appropriately sized, UL listed, grounding type power cable to meet the electrical specifications for the appliance. If you have questions about the correct cable size and length, consult a qualified installer. If the appliance will be hard wired to a junction box, the power cable must be long enough so that the unit can be moved for cleaning underneath.
- A grounded electrical connection to an electrical circuit that meets the electrical specifications of the appliance (see **SPECIFICATIONS**). The circuit must be protected by the appropriate sized circuit breaker. If you are not certain that the existing circuit meets the requirements for your unit, consult a licensed electrician.

Leveling

WARNING: Use the leveling legs to level the grinder only. Do not use them to adjust grinder height. Do not extend them higher than necessary.

- 1 Position the unit on a level counter top. Level it left to right and front to back by turning the bottom of the legs.

Connect the Power Cable

WARNING: Connect the power cord to the appropriate type and size electrical outlet. If the electrical outlet is not compatible with the power cord, have it upgraded by a licensed electrician. Do not modify the power plug. Do not use an extension cord. Do not use a power cord/plug that is damaged.

- 2 Connect the power cord to the appropriate type of electrical outlet.
- 3 Make sure that the circuit breaker supplying power to the electrical outlet is on.

The grinder is factory preset for optimal performance.

1 Lift off the hopper lid and pour in whole coffee beans.

2 Replace the lid.

3 Place a clean paper filter into the brew basket.

4 Slide the brew basket all the way back into the brew basket rails.

5 Push the START button on the front panel. The grinder will start to grind coffee into the brew basket. It will stop at the set volume.

6 Wait for the grinder motor to stop before removing the brew basket.

WARNING: Disconnect the power cord before cleaning.

WARNING: DO NOT immerse the grinder in water or any other liquid. Avoid spilling liquid into the grind housing during cleaning.

NOTICE - Do not use cleaning liquids, compounds or powders containing chlorine (bleach) or corrosives. These products promote corrosion and will damage the finishes. **USE OF THESE PRODUCTS WILL VOID THE WARRANTY.**

Cleaning the Grinder - As Needed

- 1 Disconnect the power cord.
- 2 Brush coffee grounds from the dispensing spout. Wipe off the surrounding area.
- 3 Prepare a mild cleaning solution of dish washing liquid in warm water. Wipe exterior surfaces with a cloth moistened with the cleaning solution.
- 4 Dry the exterior surfaces with a clean soft cloth. Polish exterior stainless steel surfaces with stainless steel polish.
- 5 Reconnect the power cord.

A tablet style grinder cleaner may be used to clean the inside of the grind housing, the burrs and the chute. It will also eliminate taste and odor left in the grinder from grinding flavored coffee.

- 1 With the power cord disconnected, remove the coffee beans from the hopper.
- 2 Plug the power cord into the electrical outlet.
- 3 Place a container under the grind spout and run the grinder to empty the housing of all coffee.
- 4 Pour grinder cleaner granules or tablets into the hopper, according to the manufacturer's recommendations.
- 5 Press the grind button. Run the grinder until the cleaner empties completely from the spout.
- 6 Re-fill the grinder with whole bean coffee and run two grind cycles to purge the grind housing of residual cleaner.

WARNING: Electric Shock Hazard - the procedures in this *TROUBLESHOOTING GUIDE* are to be performed only by a qualified service technician. Disconnect power when replacing components. Neither Wilbur Curtis Co., Inc. nor the seller can be held responsible for the interpretation of this information, or any liability in connection with its use.

Troubleshooting Guidelines

- This troubleshooting guide identifies some, but not all, of the possible causes for common problems that can occur.
- Use this troubleshooting guide along with the appropriate *ELECTRICAL SCHEMATIC*.

Grinder Does Not Grind Coffee - Motor Does Not Run

- 1 Check to make sure that the power cord is connected and that the circuit breaker connected to the electrical outlet is not off or tripped.
- 2 Check the circuit breaker on the back of the unit. Push in on the button to reset. If the button pops back out when you try to start the grinder, check for electrical shorts inside the unit, for example, a shorted motor.
- 3 Check for power into the timer module. If it is not getting power, trace backwards from the timer module to the power cord using the *ELECTRICAL SCHEMATIC* to find the wire or component that is preventing the timer from getting power.
- 4 If the timer is getting power, press the start switch and check for power across the LOAD and L2 terminals. If there is power out of the timer, go to step 6.
- 5 If there is power into the timer, but no power out when the start switch is pressed, check the start switch and switch wiring harness. If the switch and wiring harness are OK, replace the timer.
- 6 If there is power across the timer LOAD and L2 terminals when the start switch is press, check for power at the input terminals of the motor. If there is power at the input terminals of the motor, but it does not run, either the motor capacitor or the motor itself is defective.

Grinder Does Not Grind Coffee - Motor Runs

- 1 Disconnect power and check to make sure the funnel feeding beans into the grinder is not clogged/jammed.
- 2 Check for a broken shear disk. See *Replacing a Broken Shear Disk*.

Coffee Too Course or Too Fine

- 1 Disconnect power and check to make sure the grinder motor housing cover is on straight and properly seated.
- 2 Try adjusting the grinding burrs. See *Grinder Adjustment Procedure*. If adjusting the grinding burrs does not work, the grinding burrs may be worn and require replacement.

Grinder Shuts Off Before Brew Basket is Filled

To adjust the volume of coffee ground, see *Setting the Timer*.

Setting the Timer

WARNING: Electric Shock Hazard - Turn off power while removing and replacing the timer cover. Keep hands, other body parts and tools clear of electrical wiring during the following procedures.

- 1 Take off the timer cover, located behind the hopper, on top of the unit. The timer is found inside the cover.
- 2 The timer controls are a HIGH/LOW switch and a dial with a corresponding scale. The switch allows you to select the inner or outer scale on the dial. The outer scale range is ½ second through 15 seconds. The inner scale range is 2 seconds to 60 seconds.
- 3 Test a new adjustment by grinding some coffee. When the results are satisfactory, reinstall the timer cover.

Seconds	Ounces (Estimated)	Seconds	Ounces (Estimated)
4	1.0	15	3.8
5	1.3	20	5.0
6	1.5	25	6.3
7	1.8	29	7.5
8	2.0	34	8.8
10	2.5	39	10.0
12	3.0	43	11.3

TIMER SETTINGS

IMPORTANT: Use the above time settings as a general guide. Actual amounts will vary with the grinding burr setting and the specific coffee variety used. After changing the timer, weigh the output, then make adjustments if necessary.

Grinder Adjustment Procedure

WARNING: Electric Shock Hazard - Turn off power while removing and replacing the front cover. Keep hands, other body parts and tools clear of electrical wiring during the following procedures.

The grinder can be adjusted to make the ground coffee more fine or more coarse. Adjusting the grinder may affect the output volume. To compensate, adjust the timer (see *Setting the Timer*).

- 1 Remove the coffee beans from the hopper.
- 2 Run the grinder to clear the grinding burrs of remaining coffee.
- 3 Disconnect the power cord.
- 4 Remove the front cover.
- 5 Locate the adjusting screw and lock nut on the front of the grinder motor. Loosen the lock nut (1).
- 6 Run the motor during adjustment, turning the adjustment screw (2) clockwise will result in a finer grind. If you hear the grinding burrs starting to touch, immediately, back off 1/8th turn. Turning the screw counter-clockwise will produce a coarser grind.
- 7 To lock in the setting, hold the adjustment screw in place with a screwdriver and tighten the lock nut.
- 8 Grind some coffee beans to determine if the desired fineness/coarseness has been achieved.
- 9 Disconnect the power cord and replace the front cover.

Replacing a Broken Shear Disk

- 1 Remove the coffee beans from the hopper.
- 2 Disconnect the power cord.
- 3 Remove the front cover.
- 4 On the grind motor assembly, take out the two thumb screws and remove the housing cover.
- 5 Pull out the grinding burr/feed worm assembly. The inner half of the grinding burrs will remain within the housing.
- 6 Separate the shear cap and shear drive. The broken shear disk should fall out from the slot on the drive.
- 7 Inspect the housing and clean out any coffee or debris. Look for something that could have gotten caught inside the housing that would have caused the shear disk to break.
- 8 Re-insert the feed worm and grinding burr on the motor shaft.
- 9 Push the shear drive through the burr/feed worm assembly and align the large slot with the tongue on the motor shaft.
- 10 Rotate the burr/feed worm assembly to align the slot with the narrow slot on the shear drive.
- 11 Slip a new shear disk into the slot. Cover it with the shear cap.
- 12 Replace the grind cap and thumb screws.
- 13 Replace the front cover.
- 14 Reconnect the power cord.

Wilbur Curtis Co., Inc. certifies that its products are free from defects in material and workmanship under normal use. The following limited warranties and conditions apply:

- 3 years, parts and labor, from original date of purchase on digital control boards
- 2 years, parts, from original date of purchase on all other electrical components, fittings and tubing
- 1 year, labor, from original date of purchase on all other electrical components, fittings and tubing

Additionally, Wilbur Curtis Co., Inc. warrants its grinding burrs for forty (40) months from the date of purchase or 40,000 pounds of coffee, whichever comes first. Stainless steel components are warranted for two (2) years from the date of purchase against leaking or pitting. Replacement parts are warranted for ninety (90) days from the date of purchase or for the remainder of the limited warranty period of the equipment in which the component is installed.

All in-warranty service calls must have prior authorization. For authorization, call the Technical Support Department at 800-995-0417. Additional conditions may apply. Go to www.wilburcurtis.com to view the full product warranty information.

CONDITIONS & EXCEPTIONS

The warranty covers original equipment at time of purchase only. Wilbur Curtis Co., Inc., assumes no responsibility for substitute replacement parts installed on Curtis equipment that have not been purchased from Wilbur Curtis Co., Inc. Wilbur Curtis Co., Inc. will not accept any responsibility if the following conditions are not met. The warranty does not cover:

- **Adjustments and cleaning:** *The resetting of safety thermostats and circuit breakers, programming and temperature adjustments are the responsibility of the equipment owner. The owner is responsible for proper cleaning and regular maintenance of this equipment.*
- **Replacement of items subject to normal use and wear:** *This shall include, but is not limited to, spray heads, faucets, light bulbs, shear disks, "O" rings, gaskets, silicone tubing, silicone elbows, canister assemblies, whipper chambers and plates, mixing bowls, agitation assemblies and whipper propellers.*

The warranty is void under the following circumstances:

- **Improper operation of equipment:** *The equipment must be used for its designed and intended purpose and function.*
- **Improper installation of equipment:** *This equipment must be installed by a professional technician and must comply with all local electrical, mechanical and plumbing codes.*
- **Improper voltage:** *Equipment must be installed at the voltage stated on the serial plate supplied with this equipment.*
- **Improper water supply:** *This includes, but is not limited to, excessive or low water pressure and inadequate or fluctuating water flow rate.*
- **Damaged in transit:** *Equipment damaged in transit is the responsibility of the freight company and a claim should be made with the carrier.*
- **Abuse or neglect (including failure to periodically clean or remove lime accumulations):** *The manufacturer is not responsible for variation in equipment operation due to excessive lime or local water conditions. The equipment must be maintained according to the manufacturer's recommendations.*

Repairs and/or Replacements are subject to Curtis' decision that the workmanship or parts were faulty and the defects showed up under normal use. All labor shall be performed during regular working hours. Overtime charges are the responsibility of the owner. Charges incurred by delays, waiting time, or operating restrictions that hinder the service technician's ability to perform service is the responsibility of the owner of the equipment. This includes institutional and correctional facilities. Wilbur Curtis Co., Inc. will allow up to 100 miles, round trip, per in-warranty service call.

Return Merchandise Authorization (RMA): All claims under this warranty must be submitted to the Wilbur Curtis Technical Support Department prior to performing any repair work or return of this equipment to the factory. **All returned equipment must be properly re-packaged in the original carton and received by Curtis within 45 days following the issuance of a RMA.** No units will be accepted if they are damaged in transit due to improper packaging. **NO UNITS OR PARTS WILL BE ACCEPTED WITHOUT A RETURN MERCHANDISE AUTHORIZATION (RMA). THE RMA NUMBER MUST BE MARKED ON THE CARTON OR SHIPPING LABEL. All warranty claims must be submitted within 60 days of service. Invoices will not be processed or accepted without a RMA number. Any defective parts must be returned in order for warranty invoices to be processed and approved.** All in-warranty service calls must be performed by an authorized service agent. Call the Wilbur Curtis Technical Support Department to find an agent near you.
