

Felcana

BACK-END DEVELOPER

We are on the hunt for a best-in-class **Back-End Developer** to lead the creation of our robust and powerful platform that is capable of processing large amounts of data and delivering content quickly to a variety of users.

Felcana is a disruptive pet tech start-up that tracks the health and behaviour of cats and dogs. Along with helping owners to better understand their pets, Felcana provides reliable insights that empower vets to make earlier and more accurate diagnoses.

We are an inventive and fast-paced team that is always striving to grow both professionally and personally. We believe in being constantly challenged and we cultivate this attitude through autonomy, responsibility and open discussions. We are seeking talented individuals that share our enthusiasm and drive to help build the future.

ABOUT YOU

You are an experienced Back-End Developer looking for a new challenge building the back-end services for a new brand. You will work alongside our tech team including back-end developers and engineers where your analysis and insight will help inform our product roadmap.

We're a startup and so our team structure is flat – you'll work directly with Katherine, our Software Engineer, and Tom, our Head of Product.

RESPONSIBILITIES

- Own the development, testing and deployment of Felcana's back-end APIs powering our iOS app and connected devices
- Define the functionality, specifications and features of our back-end services
- Ensure our team follows industry standard security practices
- Maintain a high standard of code quality whilst balancing trade-offs to deploy services and features in a timely manner
- Actively co-ordinate development cycles across iOS, electronics, and back-end
- Effectively communicate complex ideas in discussions with team member

QUALIFICATIONS

- You love pets!
- Either a good degree from a leading university in a relevant discipline, coding academy experience, or a few years of professional experience
- Experience with building web apps (front-end/back-end/full stack/all ok)
- Strong programming skills in Python and Ruby, else JavaScript, Java etc.
- Experience managing servers in production, including deployment, database management, or other DevOps
- Strong Linux and Bash skills (Linux preferred)
- Experience with AWS
- Experience with Elixir

BONUS POINTS

- Experience working in a startup
- Engaged in the tech community or involvement in Open Source software
- Ambitious and self-starting with the ability to identify creative new approaches

BENEFITS

- Competitive salary dependent upon experience
- Equity options available
- 25 days' annual holiday plus bank holidays
- Childcare vouchers
- World class team that includes experienced product designers, electronic engineers, and vets
- Fabulous office within Somerset House - a location full of designers, artists, scientists and entrepreneurs
- 20% discount across all the bars and restaurants in Somerset House
- Annual bonus to spend on anything pet related

If you've got the right skillset and want the opportunity to put your mark on a new brand, we'd love to hear from you. Please send your CV along with a brief introduction to yourself to careers@felcana.com with the subject line **[Back-End Developer]**.
