

## M11 Cummins Diesel

Good day Nick,

Today we had Virg from A & B Truck Repair in Modesto, CA perform our annual smoke test day on our trucks (9 units) with out explaining any details I had him test truck number 112 (which has about 2000 miles on an overhauled M11 Cummins).

After the inital test I added 16 oz. to the warm engine. Next I drove 12 miles and had Virg retest.

He was very surprised at the change.

|         | Before | After |
|---------|--------|-------|
| test 1  | 22.4   | 3.4   |
| test 2  | 18.3   | 2.1   |
| test 3  | 20.0   | 2.6   |
| Average | 20.2   | 2.7   |

The numbers speak for themselves!

After the test he had a number of questions and commented that he would tell his son about the product ( his son runs the retail side of A & B Truck Repair). So keep an ear open you may get a call from A & B Truck Repair looking to carry your product. If they call let me know so I can claim them under my account.

Thanks,  
Ron Koehn
