

## 46' Californian Yacht w/ twin Cat 3208s & Northern Lights generator

I own a 1981 46 foot Californian (SOUTHERN CROSS) with twin Caterpillar 3208 and a Northern Lights generator. In the past I was having problems with excessive smoke and poor engine performance. I visited the Newport Boat Show and purchased a Cerma Marine Treatment for my boat which included the engine, transmission and generator. Initially when the treatment was installed I was amazed at the decrease in vibration and engine noise when the boat was at the dock. I had also noticed that the generator was almost silent. I was instructed to put some hours on the boat in order to have the product bond to the engine. I put about 10 hours on the engine when I saw that the smoke had disappeared. The engines have performed better than ever and I have never had them over 1800 rpm and have never run over 10 knots. I believe that this process is the future of the marine industry.

Thank You
