

advocate®

Improve the rooting of plant cuttings for plant propagation

Advocate is a new PGR product to help propagate plants from cuttings, reduce transplant shock and stimulate root growth in plugs and seedlings. Test results have shown that it can stimulate root growth, leading to larger root mass. Advocate enhances growth in annual, perennial and woody ornamental plant cuttings.

Active Ingredient

- 20% Indole-3-butyric acid (IBA)

Benefits

- Stimulate Root Growth of Cuttings
- Improved Plant Health

Use

Advocate can be applied via foliar spray, total immersion, basal dip and basal long soak – allowing maximum flexibility for your production systems. It can also be tank mixed and applied with other products (fertilizers, fungicides, biostimulants, plant growth regulators, etc.). (Always test tank mixes for compatibility and on a small group of plants before mixing large quantities.)

Application Guidelines

Total immersion: Totally immerse the cuttings in the mix solution for approximately 5 seconds. Immediately after removing the cuttings from the treatment solution, stick the cuttings in the planting media.

Foliar Spray: Stick cuttings in the planting media. Spray the solution on leaves and stems until the solution drips down into media.

Basal dip: Immerse basal end of cuttings up to approximately 1 inch in solution for a few seconds. Stick immediately into planting media or store.

Basal long soak: Immerse basal end of cuttings up to approximately 1 inch in solution for 12 to 48 hours. Stick immediately or store.

Crops

Cuttings including:

- Herbaceous annuals
- Herbaceous perennials
- Hard-to-root perennials
- Softwood
- Woody ornamentals
- Hardwood
- Pot rose
- Tropicals
- And more
