

Defendor[®]

SPECIALTY HERBICIDE

Defendor[®] specialty herbicide is a postemergence product that is designed to perform in cold weather. Defendor works when nothing else does. It can be applied in late fall and early spring, and provides complete control of dandelions.

OVERVIEW

When it's too cold for other herbicides to be effective, Defendor® specialty herbicide provides early season control of unsightly dandelions, clover, and other annual and perennial broadleaf weeds. Defendor gives lawn care operators and golf course superintendents a head start on broadleaf weed control and more time to complete the first applications of the season.

When applied in late fall or early winter, Defendor will control dandelions in early spring. Applications that are made in late winter or early spring, before flower bud formation, will also prevent dandelion bloom – greatly reducing callbacks and increasing customer satisfaction. With Defendor, lawn care operators can improve customer retention and save time and money.

Control in late fall and early spring

Defendor® specialty herbicide, with the active ingredient florasulam, is a systemic herbicide that is absorbed via leaves, shoots and roots of susceptible broadleaf weeds. It works as an ALS inhibitor, preventing enzyme synthesis and cell division.

Economical and effective

Defendor® specialty herbicide saves time and money by controlling high-anxiety weeds before they bloom. It's extremely effective at controlling dandelion, clover, chickweed, dollarweed, and 18 other annual and perennial broadleaf weeds.

KEY BENEFITS

- Early season control. Can be applied late fall or early spring when temperatures are still cool – a time when other postemergence herbicides are not effective.
- Economical. Provides control of high-anxiety weeds before they bloom, reducing callbacks and minimizing complaints. Saves time and money.
- Low use rates. Only need to apply 0.013 lb. a.i. or 4 fl. oz./A.

TURF SAFETY

Cool-season turfgrasses

Bentgrass
Kentucky bluegrass
Fescue (tall, chewing, creeping, red and sheep's)
Ryegrass

Warm-season turfgrasses

Bahiagrass
Bermudagrass
Centipedegrass
Kikuyugrass
St. Augustinegrass
Seashore Paspalum
Zoysiagrass

STAGE TO CONTROL DANDELION

SUPPRESSION ONLY OF DANDELION BLOOM
