

IMIDASHOT DF®

70% Imidacloprid

Unique High Quality Dry Flowable Formulation

ACTIVE INGREDIENT:

Imidacloprid, 1-[(6-Chloro-3-pyridinyl)methyl]-N-nitro-2-imidazolidinimine.....	70%
OTHER INGREDIENTS.....	30%
TOTAL.....	100%

IMIDASHOT DF® is a unique, dry, flowable formulation of a systemic chloronicotinyl insecticide. IMIDASHOT DF® enters the target pest via ingestion or direct contact. It acts by disrupting nicotinic acetylcholine receptors in the insect central nervous system. Imidacloprid is commonly used for controlling sucking insects, soil insects, and some chewing insects.

Systemic insecticides provide Long Term Control as they are protected by the elements and contained inside the plant's leaves, stems or blades. In addition, they provide Complete Coverage as the entire plant -root systems, stems and leaf portions - is protected from infestations of insects, grubs, mites.

Benefits of IMIDASHOT DF, systemic insecticide

- COST EFFECTIVE
- EASY TO APPLY
- Mix and measure for application as a foliar spray
- HIGH QUALITY water dispersible granule.
- SAFE AND EASY TO HANDLE
Minimal dust, least foam, excellent shelf life and easy container disposal.
- HIGH CONCENTRATION
- Low use rate reduces the volume of product.
- SOLVENT FREE FORMULATION is safer for the environment
