

Xcluder® Garage Door Rodent Shield™

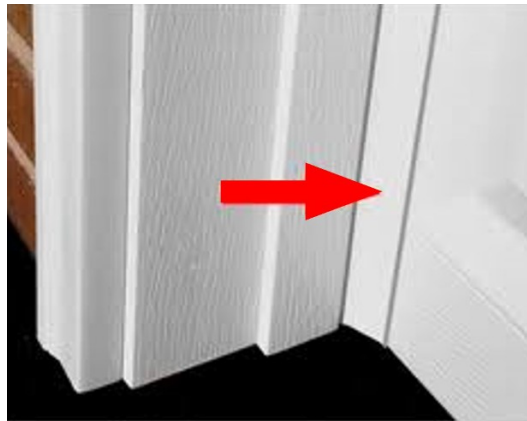

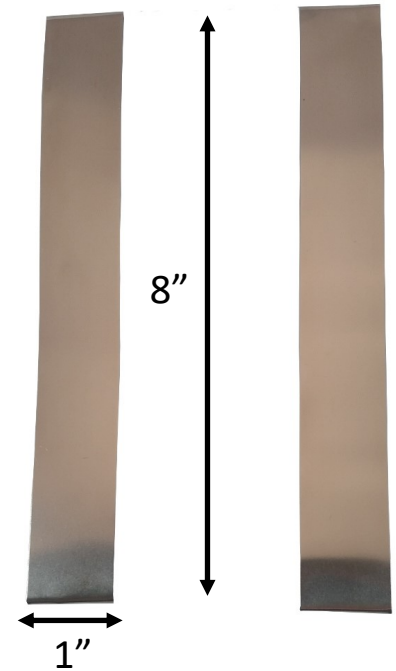

Rodent Proofing for Garage Door Side Seals

Item# 162940, 162942, 162944, 162946, 162948

Designed for commercial and residential applications.

The gaps and holes around garage doors are a common entry point for mice, rats, and chipmunks. One of the most common means of access for rodents is gnawing through the base of the seals on the sides of garage doors. Typically, these side seals are made of rubber or vinyl, and while they make a good weatherstop, they offer no protection from rodents.

Xcluder Garage Door Rodent Shields (GDRS) offer protection from rodents at their most common point of entry. The GDRS adheres to the inside of the garage weather-stripping so it is invisible from the outside. When the Xcluder Garage Door Rodent Shields are used in conjunction with Xcluder Garage Door Seals, the area around the garage door will be completely secured from any pest invasion.

Features:

- 2 x 8" x 1" strips of adhesive backed 300 series stainless steel
- 0.05" thickness of material making it perfect for installation on the inside surface of the garage door side seal
- Peel-and-stick installation. Installs in under 5 minutes with no tools required

Benefits:

- Prevents damage to garage door side seals due to gnawing rodents
- Made of high quality stainless steel so it will not rust
- Invisible from the exterior. Installs on the inside of weather strip — no painting or covering is required.
- Easy installation. No tools required; just peel and stick
- An inexpensive solution to a common rodent problem around households
- One size fits all. No need to measure or trim
