MK-III Rescue Seat

Life Support International's MK-III Rescue Seat is designed to extract personnel in any terrain, including over water and thick forest. The MK-III is fitted with a high buoyancy foam rubber flotation collar and three adjustable safety straps. The rescue seat is intended to hoist one person, but can lift up to three people.

SOLUTIONS4SURVIVAL

AIR | LAND | SEA | SPACE

The recently updated MK-III Rescue Seat is constructed of non-corrosive 304 stainless steel. The seat has a rated load capacity of 600 pounds and is compatible with most helicopters fitted with rescue hoists. The seat incorporates three folding seat arms. The arms are folded against the main tube for storage, and for lowering the seat through forested areas. The arms are folded downward for use as seats for those being rescued. For use in heavily forested areas, and to penetrate dense canopies, a ballast weight can be added to the hollow main tube by removing the nose cone.

Features and Specifications

Over-water operations with flotation collar.	Capacity 1-3 persons, 600 lbs. max.
Folding seats allow for thick forest penetrations.	Flotation Collar Buoyancy.....30 lbs.
Retention straps for each leg of the seat.	Weight.....19 lbs.
Compact and lightweight.	Overall Length35 in.
Corrosion resistant electro-coated 304 stainless steel.	Folded Diameter.....9 in.
	Legs Extended Diameter25 in.
HAZMAT: N/A NSN: N/A
