

Air conditioning pressure switch pinout, found on FPG a/c condensers.

Pin 1 and 4 are for the mid pressure point (250psi). Contacts will close when the pressure is reached. Used for triggering the fan relay.

Pin 2 and 3 are for the Low and High gas pressure points. Contacts will open when the gas pressure is below 25psi and above 415psi. Contacts will be closed, allowing normal operation of the compressor between those values.
