No power required

No moving parts

Low pressure drop

20°F to 63°F dew point suppression

BENEFITS OF THE D SERIES

No moving parts // Energy free // 10-year warranty

vanairsystems.com

The D Series from Van Air Systems

D is for Durable. D is for Dependable. D is for Deliquescent. D Series dryers are the time-proven workhorse of industrial air and gas dryers. Generations of operators have turned to the D Series for clean, dry compressed air and gas.

Think simple.

A compressed air dryer doesn't have to be complicated. Keeping compressed air lines moisture free is easy with a D Series deliquescent dryer from Van Air Systems. D Series dryers are simple to install, operate, and service. No power required. No moving parts. D Series dryers are the simplest, toughest, longest lasting air dryers available.

How it works.

Wet compressed air enters the bottom of the dryer vessel and flows through a bed of Dry-O-Lite desiccant. Dry-O-Lite acts like a sponge and absorbs water vapor from the air. Over time the desiccant slowly deliquesces, or dissolves, and forms a liquid that falls to the bottom of the vessel. Dry compressed air exists the top of the dryer.

Maintenance is easy. Drain liquid from the dryer at least once per eight hours of operation. Add new Dry-O-Lite desiccant several times per year.

Application versatility.

Install a D Series deliquescent dryer virtually anywhere. D Series dryers are installed indoors or outside. For portability, D Series dryer mount easily to trucks, trailers, and skid-packaged equipment. With no electrical components D Series dryers operate safely in areas where explosive vapors are present. D Series dryers are ideal for drying low pressure air, intermittent flows, and point-of-use applications.

D series dryers are commonly used for:

- Paint booths
- Blast rooms
- Rail yards
- Landfill gas and digester gas
- Saw mills
- Ready mix, cement and asphalt plants

D Series dryers go with the flow!

Dual D54 dryers (left) are used at a landfill to remove moisture from low pressure methane. A **D36 dryer** (right) is used to remove moisture from compressed air on a steel grit recycling trailer.

Dew point performance

Dew point is the temperature where liquid starts to condense. Cooling compressed air below its dew point causes condensation.

Dry-O-Lite desiccant suppresses dew point by 20°F. For example:

80°F Inlet dew point (saturated)
 -20°F Suppression
 60°F Outlet dew point

50°F Inlet dew point (saturated)
 -20°F Suppression
 30°F Outlet dew point

For even better dew point suppression use 10BF desiccant. High performance 10BF suppresses dew point by up to 63°F

Remember, as long as the temperature of the compressed air never falls below the dew point, no liquid will form in the air line.

10BF for up to 63°F dew point suppression

Dryer accessories

After-cooler

Automatic Drain Valves

Filters

Application tips

Cooling is critical. Install the D Series dryer at a point where the compressed air is coolest. For top performance, install the D Series dryer downstream of an AC Series after-cooler.

D Series dryers must be drained regularly. Install an MDV400 series drain valve for reliable automatic draining.

Install an F200 series coalescing pre-filter before the dryer to remove compressor lubricant. Install an F200 series particulate filter after the dryer to remove pipe scale and fine particles.

Pressure is good. Install the D Series dryer at the highest practical pressure. If using the dryer in a point-of-use application, install it before any pressure regulator.

STANDARD EQUIPMENT

D2

- Manual drain valve
- Sight window (to check desiccant levels)
- Epoxy powder coat interior finish
- PVC plastic bed support grid
- Epoxy powder coat exterior finish
- 10-year prorated warranty

D4 and D8

- Manual drain valve
- Sight window (to check desiccant)
- Vessel fabricated to ASME Code
- Epoxy interior coating
- Epoxy coated carbon steel bed support grid
- Primer & enamel exterior finish
- 10-year prorated warranty

D12 – D36

- Manual drain valve
- Sight windows (to check desiccant)
- Elliptical direct entry hatch cover
- Pressure relief coupling
- Vessel fabricated to ASME Code
- Epoxy interior coating
- Epoxy coated carbon steel bed support grid
- Primer & enamel exterior finish
- 10-year prorated warranty

D42 – D138

- Manual drain valve
- Sight windows (to check desiccant)
- Elliptical direct entry hatch cover
- Pressure relief connection
- Vessel fabricated to ASME Code
- Epoxy and polyurethane interior coating
- ABS plastic bed support grid
- Primer & enamel exterior finish
- 10-year prorated warranty

OPTIONAL EQUIPMENT

- AC Series after-cooler with liquid separator
- F200 Series coalescing pre-filter
- MDV400 Series automatic drains
- PDV- 500T Series automatic drains
- F200 Series particulate after-filter
- F101 or F102 filters for flow rates above 1200 SCFM
- Series particulate after-filter
- Pressure gauge kit
- Temperature gauge kit a (D12-D138)
- Combined pressure/temperature gauge for models (D12-D138)
- Ultrasonic Level Switch for models (D12-D138)
