* Goat's milk protein forms a smaller, softer and looser curd in the stomach compared to cow's milk protein. In addition, it is broken down faster than cow's milk protein.

** Lactose is the primary carbohydrate found in breast milk and the optimal source of carbohydrates for most healthy babies.

*** Kabrita Goat Milk Toddler Formula uses a fat blend with high 2-palmitic acid (beta palmitate) to model the fatty acid structure found in breast milk. Fat blends with beta palmitate are associated with improved calcium and fat absorption and softer stool consistency.

**** May be made in a facility in USA, Canada, Ireland, or the Netherlands.
