GENERAL INFORMATION

Product Description for Equipment Under Test (EUT)
The product that is produced by Elitech Technology Inc. “EUT” as referred to in this report is a Wireless Pressure Gauges With Temperature. The test model: PT-800, Application model: PT-500, PT-800

Objective
In order to meet the EMC requirements approved by CENELEC, the following standards will be cited:

1. **EN 61000-3-2:2014**, EMC-Limits-Limits for the harmonic current emissions (equipment input current up to and including 16 A per phase).

2. **EN 61000-3-3:2013**, EMC-Limits-Limitation of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current ≤16 A per phase and not subject

**Note:** The test data is only valid for the test sample. There is possible deviation from the original test data for other products

Equipment Modifications

No modification to the EUT was made by China Ceprei (Sichuan) Laboratory to make sure the EUT comply with applicable limits.

*Statement of Traceability: China Cepeii (Sichuan) Laboratory certifies that all calibrations have been performed using suitable standards traceable to the CHINA SCIENTIFIC MEASUREMENT INSTITUTE.

1.2 Description of Measurement Conditions

Temperature: 22°C
Humidity: 56%
Pressure: 1033mbar
Electromagnetic environment: normal

1.3 Test procedure and the test set-up

Procedure

a. The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the maximum harmonic components under normal operating conditions for each successive harmonic component in turn.

b. The classification of EUT is according to section 5 of IEC 61000-3-2. The EUT is classified as follows:
   - Class A: Balanced three-phase equipment, Household appliances excluding equipment as Class D, Tools excluding portable tools, Dimmers for incandescent lamps, audio equipment, equipment not specified in one of the three other classes.
   - Class B: Portable tools. Arc welding equipment which is not professional equipment
   - Class C: Lighting equipment, including dimming devices.
   - Class D: Equipment having a specified power less than or equal to 600 W of the following types: Personal computers and personal computer monitors.

c. The correspondent test program of test instrument to measure the current harmonics emanated from EUT is chosen. The measure time shall be not less than the time necessary for the EUT to be exercised.

Set-up

![Set-up Diagram]
1.4 Limits

The average values for the individual harmonic currents, taken over the entire test observation period shall be less than or equal to the applicable limits for each harmonic order, all 1.5s smoothed r.m.s. harmonic current values, as defined in 6.2.2, shall be either:

(a). less than or equal to 150% of the applicable limits, or
(b). less than or equal to 200% of the applicable limits under the following conditions, which apply all together:
   - the EUT belongs to Class A for harmonics;
   - the excursion beyond 150% of the applicable limits lasts less than 10% of the test observation period or in total 10min;
   - the average value of the harmonic current, taken over the entire test observation period, is less than 90% of the applicable limits.

Harmonic currents less than 0.6% of the input current measured under the test conditions, or less than 5mA, whichever is greater, are disregarded.

1.5 Verdict

This EUT is DC power supply, So it is deemed to fulfil all relevant requirements of this standard without further testing.

*Statement of Traceability:
China Ceprei (Sichuan) Laboratory certifies that all calibrations have been performed using suitable standards traceable to the CHINA SCLIENTIFIC MEASUREMENT INSTITUTE.

2.2 Description of Measurement Conditions

Temperature: 24°C
Humidity: 58%
Pressure: 1033mbar
Electromagnetic environment: normal

Limits:
- The value of $P_{st}$ shall not be greater than 1.0;
- The value of $P_{lt}$ shall not be greater than 0.65;
- The value of $d(t)$ during a voltage change shall not exceed 3.3% for more than 500ms;
- The relative steady-state voltage change, $d_c$, shall not exceed 3.3%;
- The maxim relative voltage change, $d_{max}$, shall not exceed 4%.

2.3 Test procedure and the test set-up

Procedure

a. The EUT was placed on the top of a wooden table 0.8 meters above the ground and operated to produce the most unfavorable sequence of voltage changes under normal operating conditions.
b. During the flick measurement, the measure time shall include that part of whole operation cycle in which the EUT produce the most unfavorable sequence of voltage changes. The observation period for short-term flicker indicator is 10 minutes and the observation period for long-term flicker indicator is 2 hours.

Set-up
Test model: PT-800

2.4 Verdict

This EUT is DC power supply, So it is deemed to fulfil all relevant requirements of this standard without further testing.
3.1 Continuous Disturbance Voltage at Mains Terminal.

* Decreasing linearly with logarithm of the frequency.

Note: If the limit for the measurement with the average detector is met when using a receiver with a quasi-peak detector, the equipment under test shall be deemed to meet both limits and the measurement using the receiver with an average detector need not be carried out.
3.1.4 Test procedure and the test set-up

Procedure

a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to
the power mains through a line impedance stabilization network (LISN). Other support units were connected to
the power mains through another LISN. The two LISNs provide 50 Ohm/50uH of coupling impedance for the
measuring instrument.
b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
c. The frequency range from 150 kHz to 30 MHz was searched. Emission levels under limit -20dB of the
prescribed limits could not be reported.

Set-up

The configuration is in accordance with the requirement in IEC61000-6-3, the sketch map as follow:

![Diagram](image)

</tbody>
</table>

NOTE: The lower limit shall apply at the transition frequency.  
NOTE: Additional provisions may be required for cases where interference occurs.
Test model: PT-800

3.2.4 Test procedure and the test set-up

Procedure

a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m semi/full-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
c. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarization of the antenna are set to make the measurement.
d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the turn table was turned from 0 degrees to 360 degrees to find the maximum reading.
e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
f. If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would be retested one by one using the quasi-peak method or average method as specified and then reported in Data sheet peak mode and QP mode.

Set-up

The configuration is in accordance with the requirement in EN61000-6-3, the sketch map as follow:
Test model: PT-800

3.2.5 Test Data and Records

Plane:

![Graph showing test data for Plane]

Vertical:

![Graph showing test data for Vertical]

Result: PASSED

3.2.6 Verdict

The EUT met the requirement.
Description of Performance Criterion (According with IEC 61000-6-1 Section 4)

Performance Criterion A

The apparatus shall continue to operate as intended during the test. No degradation of performance or loss of function is allowed below a performance level (or permissible loss of performance) specified by the manufacturer, when the apparatus is used as intended. If the minimum performance level or the permissible performance loss is not specified by the manufacture, then either of these may be derived from the product description and documentation, and from what the user may reasonably expect from the apparatus if used as intended.

Performance Criterion B

The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level (or permissible loss of performance) specified by the manufacturer, when the apparatus is used as intended. During the test, degradation of performance is allowed, however, no change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacture, then either of these may be derived from the product description and documentation, and from what the user may reasonably expect from the apparatus if used as intended.

Performance Criterion C

Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls, or by any operation specified in the instructions for use.
Test model: PT-800

4.1.2 Description of Measurement Conditions

Temperature: 24°C
Humidity: 58%
Pressure: 1033mbar
Electromagnetic environment: normal

4.1.3 Test procedure and the test set-up

Procedure

a. For EUT power supply:
   The surge is to be applied to the EUT power supply terminals via the capacitive coupling network. Decoupling networks are required in order to avoid possible adverse effects on equipment not under test that may be powered by the same lines, and to provide sufficient decoupling impedance to the surge wave. The power cord between the EUT and the coupling/decoupling networks shall be 2 meters in length (or shorter).

b. For test applied to unshielded unsymmetrically operated interconnection lines of EUT:
   The surge is applied to the lines via the capacitive coupling. The coupling / decoupling networks shall not influence the specified functional conditions of the EUT. The interconnection line between the EUT and the coupling/decoupling networks shall be 2 meters in length (or shorter).

c. For test applied to unshielded symmetrically operated interconnection / telecommunication lines of EUT:
   The surge is applied to the lines via gas arrestors coupling. Test levels below the ignition point of the coupling arrestor cannot be specified. The interconnection line between the EUT and the coupling/decoupling networks shall be 2 meters in length (or shorter).
Test model: PT-800

4.1.5 Verdict

This EUT is DC power supply, So it is deemed to fulfil all relevant requirements of this standard without further testing.
Test model: PT-800

4.2.2 Description of Measurement Conditions

Temperature: 21°C  
Humidity: 58%  
Pressure: 1033mbar  
Electromagnetic environment: normal

4.2.3 Test procedure and the test set-up

Procedure

a. Electrostatic discharges were applied only to those points and surfaces of the EUT that are accessible to users during normal operation.
b. The test was performed with at least ten single discharges on the pre-selected points in the most sensitive polarity.
c. The time interval between two successive single discharges was at least 1 second.
d. The ESD generator was held perpendicularly to the surface to which the discharge was applied and the return cable was at least 0.2 meters from the EUT.
e. Contact discharges were applied to the non-insulating coating, with the pointed tip of the generator penetrating the coating and contacting the conducting substrate.
f. Air discharges were applied with the round discharge tip of the discharge electrode approaching the EUT as fast as possible (without causing mechanical damage) to touch the EUT. After each discharge, the ESD generator was removed from the EUT and re-triggered for a new single discharge. The test was repeated until all discharges were complete.
g. At least ten single discharges (in the most sensitive polarity) were applied at the front edge of each Horizontal Coupling Plane opposite the center point of each unit of the EUT and 0.1 meters from the front of the EUT. The long axis of the discharge electrode was in the plane of the HCP and perpendicular to its front edge during the discharge.
h. At least ten single discharges (in the most sensitive polarity) were applied to the center of one vertical edge of the Vertical Coupling Plane in sufficiently different positions that the four faces of the EUT were completely illuminated. The VCP (dimensions 0.5m x 0.5m) was placed vertically to and 0.1 meters from the EUT.

Temperature: 24°C
Humidity: 58%
Pressure: 1033mbar
Electromagnetic environment: normal

4.3.3 Test procedure and the test set-up

Procedure

   a. Both positive and negative polarity discharges were applied.
   b. The length of the “hot wire” from the coaxial output of the EFT generator to the terminals on the EUT should not exceed 1 meter.
   c. The duration time of each test sequential was 1 minute.
   d. The transient/burst waveform was in accordance with IEC 61000-4-4, 5/50ns.

Set-up

4.3.5 Verdict

This EUT is DC power supply, So it is deemed to fulfil all relevant requirements of this standard without further testing.

4.4.2 Description of Measurement Conditions

Temperature: 21 °C
Humidity: 58%
Pressure: 1033 mbar
Electromagnetic environment: normal

4.4.3 Test procedure and the test set-up

Procedure

a. The EUT shall be tested within its intended operating and climatic conditions.
b. The test shall be performed with the test generator connected to each of the coupling and decoupling devices in turn, while the other non-excited RF input ports of the coupling devices are terminated by a 50-ohm load resistor.
c. The frequency range is swept from 150 kHz to 80 MHz, using the signal level established during the setting process and with a disturbance signal of 80 % amplitude. The signal is modulated with a 1 kHz sine wave, pausing to adjust the RF signal level or the switch coupling devices as necessary. The sweep rate shall not exceed 1.5 x 10^-3 decades/s. The step size shall not exceed 1 % of the start and thereafter 1 % of the preceding frequency value where the frequency is swept incrementally.
d. The dwell time at each frequency shall not be less than the time necessary for the EUT to be exercised, and able to respond. Sensitive frequencies such as clock frequency(ies) and harmonics or frequencies of dominant interest, shall be analyzed separately.
e. Attempts should be made to fully exercise the EUT during testing, and to fully interrogate all exercise modes selected for susceptibility.

Set-up

*Statement of Traceability:*  
China Ceprei (Sichuan) Laboratory certifies that all calibrations have been performed using suitable standards traceable to the CHINA SCIENTIFIC MEASUREMENT INSTITUTE.

4.6.2 Description of Measurement Conditions

Temperature: 20°C  
Humidity: 60%  
Pressure: 1033mbar  
Electromagnetic environment: normal

4.6.3 Test procedure and the test set-up

**Procedure**  
The test procedure was in accordance with IEC 61000-4-3  
a. The testing was performed in a fully-anechoic chamber. The transmit antenna was located at a distance of 3 meters from the EUT.  
b. The frequency range is swept from 80 MHz to 1000 MHz, 1400 MHz to 2000 MHz with the signal 80% amplitude modulated with a 1kHz sinewave. The rate of sweep did not exceed 1.5 x 10^-3 decade/s. Where the frequency range is swept incrementally, the step size was 1% of preceding frequency value.  
c. The dwell time at each frequency shall be not less than the time necessary for the EUT to be able to respond.  
d. The field strength level was 3V/m.  
e. The test was performed with the EUT exposed to both vertically and horizontally polarized fields on each of the four sides.
Test model: PT-800

Set-up

![Diagram](image)

4.6.4 Test Data and Records

The EUT was tested that it worked at the normal state.

4.6.5 Verdict

The EUT was working as normal, so it met the requirement of performance criteria A.
