Caution >

Alignment of Guide Spacing

- 1 Put the guide on this blank tenporarily using scotch tape at the value point.
- 2 Connection all sections.
- 3 Grip the position of grip space.
- 4 You keep the rod horizontally.
- 5 Shake the blank up and down.
- 6 You can see the point that was not moved in the grip section.
- 7 This is the point 5th guide.
- If the 5th guide is different from the point that I wrote down before, please dislocate the 4th guide to the point that not move point. The 4th guide position is very important. If the guide put on different position, fly line can not go through the guide.

 And please put the guide adding same error range of 6th guide from the 5th guide til the stripping guide.
