

RESEARCH SUMMARY

Efficiency and Enhancement of Fun whilst performing a variety of activities in Fun Shorts™ through 6 months

CLINICAL PROGRAM

When SORRYIMBUSY first developed the Fun Shorts™ in 2022, they were tested with a small focus group after only 3 months of clinical studies. Longer term and more conclusive data on fun output are needed before releasing them online.

CLINICAL TRIAL

Design: An ongoing, multinational, observer-blinded, randomised, placebo-controlled trial examined the efficiency of fun output through the use of the Fun Shorts™ during multiple activities over a 6 month period.

Intervention: 223,000 participants 16 years of age or older and 3984 participants 12 to 15 years of age were randomly assigned a Blue/Yellow/Pink pair of Fun Shorts™ or placebo pair of mesh shorts.

Participants underwent a vigorous range of activities with all events measured and evaluated during and immediately after use. Follow up surveys were also conducted at the end of the 6 month period.

RESULTS

Efficiency: Dopamine and overall fun satisfaction levels spiked dramatically during the first 7 days after the first wear. These results were harmonious throughout all activities tested.

After 1 month, fun levels peaked at 99% output and stayed consistent over the following 5 month period. No adverse effects were measured through use of the Fun Shorts™ over the entire 6 month period.

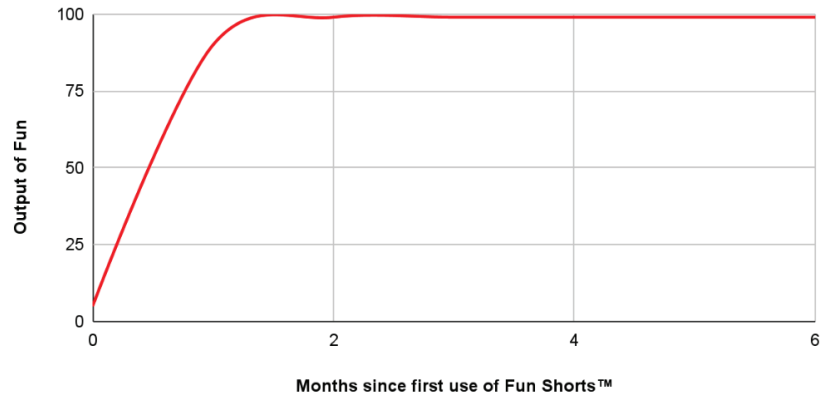

Placebo mesh short results displayed no spikes or dips in fun output levels. It was noted that some participants who were given the placebo mesh shorts started to develop issues within their personal lives with friends calling them 'boring' and 'bland' for wearing such mediocre shorts.

LIMITATIONS AND REMAINING QUESTIONS

- How well do the Fun Shorts™ increase fun output on other intergalactic planets?
- Would other colour ways in the Fun Shorts™ provide an even higher increase in fun output?

CONCLUSIONS

SORRYIMBUSY's Fun Shorts™ maintained an exemplary fun output and safety profile and a high level of efficiency over a 6 month period, with a gradual increase over time. The Fun Shorts™ have been fully approved by the FDA and are suitable for retail purposes at the RRP of AUD\$60.
