GLOSSARY OF SYMBOLS

+ Signifies strict capacity specifications

Crown Glassware were the first to introduce capacity embossing in the base of the glass. This method of marking proved the most successful, in that the glass was able to maintain a 'clean' look without having a capacity and scale device stamped on the side.

■ Signifies fully toughened

'Toughened' glassware involves heating the glass to very high temperatures then cooling it rapidly. This process renders the glass both shock and heat resistant.

Features and benefits

- More resistant to strong shocks, breakages and scratches
- Resistant to sudden heat changes and can be easily used in microwaves
- Excellent lifespan by means of durability
- Breaks into tiny, blunter pieces in the case of strong shock instead of sharper pieces
- Highly resistant to the effects of soapy water, acids and dishwasher use
- Less glass turnover, minimum need for replacement

□ Signifies rim toughened

Rim 'toughened' glassware involves heating the rim to very high temperatures then cooling it rapidly. This process renders the rim both shock and heat resistant.

◇ Signifies crystal glass (lead-free)

For your more discerning customers, we now have a wider offer of Crystal glass (lead-free) drinkware.

The terms 'lead' and 'crystal' seem to be inextricably linked, with the clarity and resonance for which high grade crystal is renowned, attributed solely to its lead content. But now these qualities can be found in lead-free glassware.

A group of Italian scientists decided to tackle the manufacturing process without using lead, a much-maligned substance that has, however, proved safe in modern crystal products. The research team hit upon a recipe using fine sand, soda ash, lime and assorted minerals including calcium sulphate and aluminium hydrate as well as a number of secret ingredients. They heated these substances to a certain temperature for a specific period of time to produce a glass that rivals lead crystal in a number of ways.

- 'Crystal glass (lead-free)' combines the clarity or luminosity, normally associated with lead crystal with the ability to be blown in fine-drawn shapes
- It also has the exquisite clear and resonant ring of fine crystal
- Unlike lead crystal products, crystal glass (lead-free) is dishwasher safe

This development has created a third category in the market place, positioning 'crystal glass (lead-free)' in the middle to upper end with glass at the bottom and lead crystal at the top.

Luigi Bormioli and a selection of Bormioli Rocco products are characterised by a similar clarity and ring to that of lead crystal despite the absence of lead oxide. The bowls and stems are air blown in one piece and the emphasis is on providing a fine, high quality product without the cost of lead crystal.
