

DEL Ozone™ MDV

Eliminate Ozone Offgas

DEL Ozone™ is now offering a new system to eliminate ozone off-gassing in your pool. The MDV (Mixing Degas Vessel) allows a higher concentration of ozone to be used.

The result? Less chemicals; no ozone bubbles; cleaner and fresher water. **The benefits of the DEL MDV are:**

- This gives you the freedom to “Oversize” ozone to achieve maximum chemical reduction for cleaner and fresher water
- Prevents ozone bubbles from returning to the pool, which eliminates bubble noise
- Eliminates unused ozone from the pool (both indoor and outdoor pools)
- Eliminates the potential of ozone reacting with the pool components such as covers, fittings, pillows or surfaces
- Prevents bubbles from gathering under the pool cover
