

**⚠ CAUTION: Read this before installing lava rock**

- Lava rock is heat-resistant when used with standard gas fireplaces and under non-extreme heat conditions.
- Wet lava rock should never be placed on a fire; allow them to dry completely before burning. Though rare, wet lava rock could crack or pop out when they become hot.
- After several burns, the lava rock may develop a residue or discoloration from charring. Wash with lukewarm water and soap to remove these stains.
- Lava rock may be used alone or in combination with decorative fire stones or fire glass.

**Follow all instructions included in your fireplace owner's manual.
