

RURAL FENCE STILE BLOCK

Hutt Concrete Products has designed this Rural Fence Stile Block for climbing over fences. This is a great fence stile as often times wooden stiles can be damaged, often by farm stock and other animals. Or they can deteriorate over time. Wooden Stiles also can become very slippery in the wet. HCP has developed a stile that has enough weight in it that it should not be able to be moved by any farm animal or human (without machinery) as they weigh half a Tonne each. This means once it is in place it is extremely unlikely to be moved again. Also being made of concrete this is a very durable material and has a life expectancy of 50 years. We have exposed the aggregate on the top of the step to increase the grip of the tread so even in the wet it retains the tread. The block has 2 swift lifts on the side for moving. This allows easy installation and moving of the block when needed.

DIMENSIONS

Weight (kg)	481
Total Height	600
Width	600
Length	600
Swift Lift Size	1.3
