

Stéfani Cristal Filter

Transparency and quality

For more than 50 years Stéfani has been producing filters, purity systems, large earthen jugs and clay jugs used for storing and cooling water, all over Brazil and abroad. Tradition and quality guarantee the best products for you and your family.

How to set up

1. Start the setting up fixing the griffin at the upper reservoir.
2. Withdraw the two washers of the griffin and make them fit in, one turned to the external part of the piece and the other to the internal one.
3. Fix the porous porcelain filter in the upper reservoir according to the picture.
4. After that, fix the lower reservoir to the base.
5. Check if the washers and nuts are adjusted enough to avoid leakage. Do not press excessively.
6. Now, your Stéfani Filter is ready to be utilised.

Maintenance and care

- The porous porcelain filter has always to be washed when there is a reduction of the filtered water flow. When washing the porous porcelain filter and the filter, use only water, hands or a smooth brush. Never use salt, sugar, detergent, soap, or any other chemical product.
- In order to keep the water quality, it is essential to change the porous porcelain filter every 6 months. Mark in your calendar the day of the changing. Use only porous porcelain filters produced by Cerâmica Stéfani.
- When washing your filter use only water, smooth sponge and neuter soap. Avoid sapolio (cake of detergent powder), abrasive sponges and products derived from petroleum, in order not to scratch or harm the piece.

Stéfani Filters eliminates chlorine flavour, retain agriculture chemicals, heavy metals and floating particles in water, keeping it naturally clear. Therefore we recommend you to utilise water provided by the public services.

Guarantee
