POINTY HEADED STUFF

CONSIDER YOURSELF WARNED!

SURGE PROTECTOR ANATOMY

Super Quick setup

WARRANTY

First, a few technical things that make our engineers pretty proud:

Model #: 360313

Electrical Ratings: 15A, 120V, 60Hz, 1800W

Surge Energy Joule Rating: 450 Joules (a joule is very unhappy with yourself. a measure of how much energy a surge protector can take before it bites the dust)

Response Time (the time it takes for the surge protector to kick in): <1 Nanosecond

Maximum Spike Current: 18.000A

UL Clamping Voltage: 500V

EMI/RFI Noise Filter: 150kHz - 100MHz, up to 40dB

How Your Suite Protects

Inside vour Habitat Surge Protector is a smart little auv called a metal oxide varistor (MOV). When the voltage coming out of the wall exceeds 120 volts (standard) it acts as kind of a relief valve diverting roque voltage from your sensitive electronics.

Please follow these cautionary statements. If you don't, your

Suite might break, your warranty will be void, and you will be

3. ▶ Use indoors only and do not use near water. You listening, SCUBA guy?!

- Don't plug your Surge Protector into anything but a grounded outlet (the kind with three holes in the socket).
- Do not plug things in that will exceed the electrical ratings (see "Pointy Headed Stuff")
- ▶ Don't use the Surge Protector with a heater, conventional oven, convection oven, microwave oven, generator, sump pump, water-related device. life support device, medical device. vehicle battery charger.
- Ouit using your Surge Protector if either indicator light is not on, (See "Surge Protector Anatomy" for more information.)
- ▶ If you're feeling all handy and want to alter or repair your Surge Protector... Don't.

Read it. Know it. There will be a quiz.

- (6) AC Outlets -- Put your standard plugs in here and then, uh, they're plugged in.
- (B) Advanced Surge Protection Deep inside lies the defender of the connected devices you plug into the AC outlets. It's there waiting to act on your behalf when evil transient voltage rears its ualy head.
- Blue "Protected" LED This blue beacon of truth tells you everything's alright. If it goes out, your surge protector has absorbed a surge and sacrificed itself to save your electronics. Shed a tear, then replace it.
- (D) Green "Grounded" LED Lets you know the outlet vou're plugged into is grounded. If this light doesn't come on, no bueno, use a different outlet.
- (E) ON/OFF Switch This versatile switch controls the power to all six AC outlets. Overloaded? Not likely, but no problem. Just "Reset" by switching off then back on again.
- (F) 3' Braided Cord Flexible, shielded and braided lenath of 14 aguae awesomeness. Insert the plug-end into an outlet and it makes vour Surge Protector work.

1. Plug stuff into your Surge Protector.

- 2. Plug your Surge Protector into a grounded wall outlet.
- 3. Flip the switch on!
- 4. Standard fist pump.
