

Model 076S Expansion Relief Valve

SPECIFICATION SHEET

Expansion Relief Valves are used on AST piping for relief of excess pressure caused by thermal expansion of liquid. The valve allows product to return back to the storage tank.

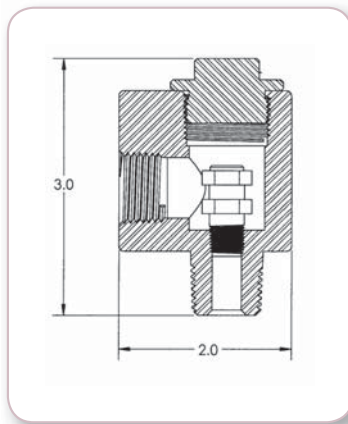

Precise pressure relief settings of 25 or 50 PSI (specify). Compatible for use with line leak detection systems.

Features

- 90° configuration

Construction Details

- Body and cap are stainless steel
- Relief fitting, stainless steel with Viton®

I.D Number	Inlet Size	Outlet Size	Expansion Relief	Weight (lbs)
076S--0100 AV	½" M	½" F	25 PSI	1.50
076S--0200 AV	½" M	½" F	50 PSI	1.50

*Consult Price List for BSP options.
