Anton Bauer 26V batteries can be used to power any full size Alexa camera body including LF and 65. Alexa SXT-V and earlier cameras can also utilize original 14.4V Anton Bauer batteries but note that the OLED display will show a low voltage warning since this product is intended for high voltage use. Alexa LF and 65 cameras require high voltage and will not power on using a 14.4V battery.

- D-Taps are regulated to 1.5V.

Installation

1. Align pogo pins with camera contacts.
2. Attach bracket to camera using included 2.5mm allen wrench.
3. With power source present, OLED display will show voltage information.
4. When using smart batteries, toggling left or right will change between percentage, runtime, or voltage.
5. Active source is indicated by a dot next to the source name.

Usage

6. Accessory current limit can be set to 2.0A, 3.5A or 5.0A, by toggling left or right and pushing the menu button to set the AKS AMPS. The arrow will blink once to indicate selection. If button is not pushed, limit shown will be set after 2 seconds.
7. If accessory current limit is exceeded, power to accessories will be cut off, leaving the camera powered. PWR FAULT RESET? will be displayed and menu button can be pushed to re-enable power to accessories.

NOTE: The installation and usage diagrams show the 26V Sharkfin Battery Bracket but Single Bracket is the same.
