1. Locate the baffle on the back of the LPL mount.

2. Peel back a small portion of the tan backing from the tape – do not remove backing entirely.

3. Slowly attach the tape to the baffle ledge. Hold the ledge between your fingers with one hand and apply pressure with the other.

4. As you apply through the corners, use the included allen wrench to press the tape firmly into the corner before continuing.

5. Continue steps 3 and 4 until the entire baffle ledge is covered.
