## EFFECTS AND DEVICES

The Endless Summer is an all-analog, real spring reverb in pedal form. It features a boost allowing you to make things gritty, or go full-on over the top fuzzy and psychedelic. Simply put, it's the coolest sounding and most unique reverb available!

Start with the balance all the way to the left to get a splashy reverb with a slight "buffered" boost. 9 o'clock grits it up and boosts your amp. Things get crazy at 12 o'clock! Dial in the color and depth with the brightness control.

**ENDLESS SUMMER**  
**(Real Spring Reverb Booster)**

### Controls:

#### BALANCE:

Controls the amount of reverb and boost.

#### BRIGHTNESS:

Controls reverb shape.

To get the most "standard" reverb sound- Keep the Brightness all the way up. Balance should be at about 3-4. This will be unity gain, and provide the most amount of reverb, which is usually more than enough.

Bringing the Brightness down will dampen or tame the reverb. Both parameters are gain stages, so bringing the Brightness down means you'll have to make up for it with the Balance.

## More details...

Current draw = 20 mA

Operates on a standard Boss style 9vdc power supply (not included).

Enclosure size:

5.625" x 4.625" x 1.563"

Available in cream or black enclosure.

Some noise and interference can appear with the Endless Summer. It has to do with the nature of the spring reverb tank being unbalanced. The tank can literally act as an antenna for interference. All spring reverbs and turntables are susceptible to it, but there are some tricks you can do to keep the noise away.

- Quality cables with shorter runs, and keep the connectors between pedals as nice as the guitar / amp cables.
- Be mindful of speakers, monitors, radio towers, and other electromagnetic interference.

Usually, just using a quality power supply is enough to squash any interference. If you're running multiple effects from a power brick, you're probably all set. If you have one or a few that are on a cheap power supply / wall wart (or daisy chained from it), try a quality regulated one. We recommend the Electro-Harmonix US96DC-200BI power supply.

**Electro-Harmonix US96DC-200BI Power Supply for most Electro-Harmonix Pedals**
