

Product Information

ADBLUE

AQUEOUS UREA SOLUTION

Description

Adblue (the registered trade mark for AUS32) is a 32.5% aqueous urea solution developed for use in selective catalytic reduction (SCR) systems fitted to diesel engines. The purpose of this system is to reduce nitrogen oxide emissions present in the exhaust gas stream. The product consists of a 32.5% solution of urea in de-mineralised water and is clear, non-toxic and safe to handle.

Adblue can be stored for 1 year, ideally away from direct sunlight and temperature extremes. Its freezing point is at -11°C, and upon thawing returns to initial quality. It should be stored in a sealed package in a well ventilated storage area.
