## **MPZPLUS ULTRA-HIGH-PERFORMANCE ENGINE OIL ADDITIVE**

### **DESCRIPTION:**

MPZplus is a temperature-activated, high-performance engine oil additive engineered to protect the engine and motor oil. The engine is protected by forming a robust anti-wear boundary layer on hot metal components that do not wash, rub, or burn off. The oil is protected by significantly enhancing the untreated engine oils' anti-wear, anti-oxidant, and corrosion inhibitors. MPZplus reduces friction wear, protects bearings from varnish and sludge, and is Catalytic Converter and o2 sensor safe.

### **FEATURES & BENEFITS:**

- Reduces friction and wear on cylinder walls, rings, and critical valve train components
- Lower coefficient of friction means a cooler running engine
- Protects engine and turbo bearings from varnish and sludge
- Protects both your engine & untreated motor oil

### **APPLICATIONS:**

One 12oz. bottle of MPZplus treats up to 8 liters or quarts of engine oil. Recommended for use in Modern Muscle Cars, Sports Cars, Classic Cars, Exotics, on-road, and off-road applications.
