

# Pentart STRUCTURE PASTE

## What it is:

A water based dense white paste, slightly grainy. It's thicker and firmer than modeling paste and holds bold texture and detail.

## When to use it:

Use when you want hard, defined, sculptural textures—perfect for raised stencil work, distressed finishes, and detailed surfaces on wood, furniture or canvas.

## How to use it:

1. Apply thick or thin with a palette knife or brush.
2. Can run it through a stencil
3. Can be stamped, scraped, or textured while wet.
4. Paint or wax once dry.

## Pro Tips:

- Tint with paint or pigment before using.
- Sand after drying for a distressed or carved effect.
- Holds up great under heavy finishes or layering.
