## FlyingToyz Performance Boomerang Instructions

FlyingToyz Boomerangs are sport products designed to be thrown and caught. Wooden Boomerangs need to be made for left or right handed throwers so be sure to buy either right OR left handed boomerangs.

**SAFETY: RECOMMENDED AGE: 14+**  
 Never throw in windy conditions.  
 Find a sheltered area, clear of people, objects and trees with at least a 50 meter radius for the FlyingToyz Performance Boomerangs. Ensure throwing instructions are understood!

### THE GRIP

Hold the boomerang near the tip with the flat side away from you. Grip the boomerang with a pinch grip.

### THE AIM

Face the breeze, now aim at 45 degrees to the right of the breeze and just above the horizon, (right for right handed boomerangs and left for left handed models).

### THE THROW

The boomerang should be thrown so that it is close to the vertical, across the wind.

### NEVER LAID OVER FLAT!

Throw it forward and upwards like a dart towards the horizon, using a fast spinning vertical motion.  
 Use a snap of the wrist throw.  
 Spin counts more than power.  
 Never throw in windy conditions.

### THE CATCH

Thrown correctly, the boomerang will return to the thrower from the left hand side (for right-handed booms and right side for left handed boomerangs). Aiming for the middle as it hovers down, clap hands together catching the boomerang.

### WARNING:

Boomerangs can be dangerous when used improperly.  
 Use safely and far from the vicinity of other persons, roads, vehicles and houses.  
 The manufacturers and distributors take no responsibility for their use or misuse.
