

Protective face shield in transparent polycarbonate to protect against possible pathogens: a protective barrier for the whole face.

Its use prevents saliva particles, splashes and sprays from coming into contact with the mucosa of the eyes or mouth of the user, allowing for maximum protection of the eyes and face, while also ensuring good ventilation.

The AMA face shield can be used over prescription glasses and surgical masks without creating discomfort.

The product is equipped with an elastic headband. Length and tension can be varied by means of two slide buckles at the end of the frame. The two knobs on the sides of the frame allow for fixing and adjusting the orientation / angle of the screen when rotated upwards, to a maximum angle of 180°. The mechanism has been designed so that the screen does not lift due to involuntary gestures but at the same time it can be lifted without difficulty when needed. This design helps to ensure that the screen is not lifted off in case of sudden head movements. The total weight of only 160 g (5.6 oz.) allows prolonged use without tiring the user. **The 08840 face shield is currently entirely Made in Italy and shortly it will also be produced in our Indianapolis, IN - USA facility.**

The face shield 08840 has been designed to comply with the requirements of the EN 166:2001 Standard for PPE protection, category II, class of use III and it can be sanitized and reused.

Personal protective equipment for face and eyes must be chosen according to the risk situations identified by analyzing the activities and working methods.
