SPREAD THE COST OF YOUR LOCOS

New locomotive announcements are exciting, but they also give you time to save up or pay for your models over time at no extra cost!

We offer quick, easy options, through **Partial.ly**. This allows you to spread the cost of your order anywhere between one and six months. You can choose the start date, how many months to split over, and if you want to make an initial payment.

Simply click on the basket when you are pre-ordering your locomotive on the Accurascale website, then click the **Partial.ly** button and configure your plan.

For Pre-order items we recommend closely matching the term (between one and six months) with the ETA of the goods.

Please note: **Partial.ly** is not a credit option. You will not be sent anything until the model has been fully paid for. Pre-order items that are imminently arriving, or in stock items, that ordered with **Partial.ly** will be automatically cancelled.

GM - GENETICALLY MODIFIED

We have built on a solid foundation and made something great, even better! Taking on the Hattons Originals Award Winning Class 66 gave us an excellent platform to build the ultimate Class 66 in 4mm/00. Our first run consists of six different liveries and numbers as we take our first trip down route 66. Taking on the tooling and bringing it in line with the rest of our range has been an interesting and fun challenge. Check out the enhancements we have made below!

SHED HEAVEN

For 25 years now, the Class 66 has been the 'go to' freight locomotive for FOCs across the British network. Kicking off with 250 examples for the then newly formed EWS, the 'Sheds' soon saw off a variety of heritage designs so loved by enthusiasts. Adopted across the board, over 400 ply their trade across the country, with more active throughout Europe.

A must for the Accurascale range, our model will cover all the major and some of the more subtle variations this large fleet of locomotives gained across its extremely successful career.

 Class 66 locomotives
 available to pre-order.

The Class 66 enhancements include

- Enhancing the model with redesigned axle boxes for the smoothest running
- Easier decoder access with a lift off roof section upgrading the PCB to eliminate wiring
- Revised lighting to give access to day, night and yard mode under DCC
- Hall sensors added to DCC sound models
- Cab access step and handrails have been moved from body mount to chassis mount to allow for breakage free access to chassis
- Two types of cab interior
- Cab Front Handrails now have the option of 5 point or 7 point mounting with correct round profile handrail mounts

Both DC silent (DCC ready) and DCC sound versions are available for all our locomotives

All Class 66 models feature

- High level of detail
- Die-cast chassis
- Five-pole motor with twin flywheels
- DCC ready & DCC sound (ESU loksound v5) options
- Details specific to individual prototypes
- High fidelity metal and plastic parts
- Rotating axle boxes
- Helical gears for maximum performance
- Comprehensive lighting functions
- And other typical Accurascale features!

AN ENTHUSIASTS FAVOURITE

The Class 50s were originally leased from English Electric by BR to operate over the non-electrified parts of the West Coast Main Line. In the early 1970s when electrification was completed, they were bought by BR and transferred to the Western Region to replace the Class 52 hydraulics. Continuing the tradition of Western Region diesels named after famous warships, they operated until the mid-1990s for NSE and latterly across some very memorable railtours all over the UK.

£59.95

SEA CHANGE

Never before produced in ready-to-run form in any scale, we present the late-style Mk.2c variant with their characteristic small 'air con'-style toilet windows. Famously designed to be retrofitted with air-conditioning equipment, a modification that never took place, 150 vehicles were built at Litchurch Lane, Derby, between 1969 and 1970 to five designs (out of 250 Mk.2c in total), primarily for the London Midland Region: Tourist Second Open (TSO), Corridor First (FK), Open First (FO), Brake Corridor First (BFK) and Brake Open Second (BSO). In the 1980s four further types were introduced, SK and SO, Corridor Composite and a mini buffet with trolley space, known as TSO(T). All nine of these versions will feature in our range.

£259.99

NAPIER ICONS

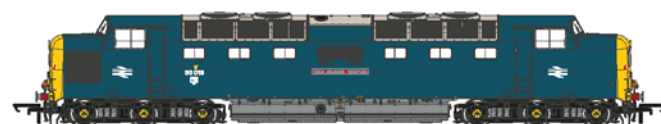

Few locomotives have captured the imaginations of enthusiasts quite like British Rail's English Electric Type 5/class 55 'Deltics'. First introduced in 1961, their twin Napier Deltic engines generated 3,300 horsepower, making them the most powerful single unit diesel locomotives yet produced at that time. Running on crack East Coast Main Line trains, and later, cross country runs, the Class 55s provided a fitting replacement for the famous Gresley racehorses such as the A4 Class Pacifics until they were withdrawn in 1982.

RUN II

BR 21T MINERAL WAGONS & BR COIL-A STEEL WAGON

1:76.2 SCALE/OO GAUGE EXPECTED DELIVERY Q2 2023

NEW VARIANTS AND RUNNING NUMBERS

Introduced in 1950, almost 14,000 of these mineral wagons were built for BR. There were two 21ft 6in long designs with twin side doors and one end door. The 21ton wagons (MDO and MDV) were close to their 16 ton predecessors in height, and lasted longest both in production and in service, the last wagons being withdrawn in 1992. In the late 1950s/early 1960s, two purpose built 21ton designs were created on the frames of 21ton mineral wagons, giving birth to the Coil-A rolled strip steel carrier.

SR D1478/1479 BANANA VAN

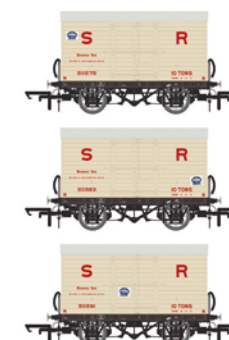

1:76.2 SCALE/OO GAUGE
EXPECTED DELIVERY Q4 2023

ACCURASCALE GOES BANANAS

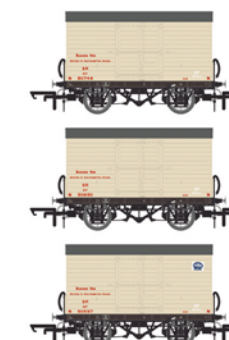

The opening of Fyffes' dedicated banana berth at Southampton in 1935 led to the Southern Railway building its own fleet of 200 banana vans, to Diagram 1478, to meet the needs of the expanding banana trade. Further expansion followed, as Fyffes moved operations to the Royal Albert Docks in London, and a further 150 Diagram 1479 vans were ordered, being built to a slightly different pattern.

PACK A SR D1478 Van
Original SR Livery (pre-1936)

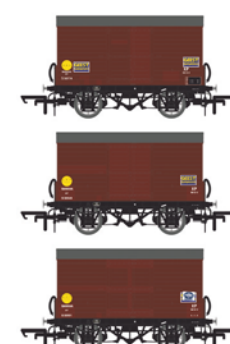

PACK B SR D1478 Van
Original SR Livery (pre-1936)

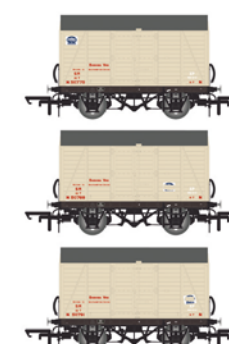

PACK C SR D1478 Van Modified

FNA-D 'NEW GENERATION' NUCLEAR FLASK CARRIER

1:76.2 SCALE/OO GAUGE
EXPECTED DELIVERY Q3 2023

TWIN PACK
£74.95

THE NUCLEAR OPTION

Forty of these striking vehicles were built for the Nuclear Decommissioning Authority (NDA) between 2014 and 2019, numbered 11 70 9229 001-040. They are used for carrying spent fuel from nuclear power stations and sites undergoing decommissioning to the facility at Sellafield. Working closely with WH Davis, Accurascale was given extensive access to drawings as well as the opportunity to survey the real wagons in the quest to create the most accurate model of these distinctive prototypes.

Pre-production artwork is shown above. The final production models differ slightly
