

SUBJECT

**2005 Dodge Ram Vehicles
Equipped With An Automatic Transmission**

MODEL NUMBER

C14045/C44045 Exhaust Brake kits

A recent change by Chrysler to all 2005 model year trucks equipped with an automatic transmission now requires the use of Pacbrake C20141 ECM bypass kit. When installing our C14045 or C44045 Pacbrake exhaust brake without the use of a Pacbrake automatic transmission control unit the bypass kit **MUST** be used.

C20141 is NOT REQUIRED if a Pacbrake Automatic Transmission control unit is being installed. Our control unit is included in the following Pacbrake kits for vehicles equipped with automatic transmissions

-C14030AT

-C14045AT

-C14046AT

-C44049

-C44051

-C44052

A programming change by the factory to the engine ECM, now has the exhaust brake enable circuit turned off. This change effects 2005 vehicles equipped with an automatic transmission only.

Pacbrake kit C20141 includes a micro switch and bracket to mount on the accelerator pedal and a relay for cruise control disable. The kit comes complete with all the necessary components and detailed installation instructions.

***Please Note:** C20141 is also available as an option to eliminate the 2 second delay in activating the exhaust brake for 2005 Dodge Ram vehicles equipped with a manual transmission.*
