

## HOW TO USE THE SPRAY

- Read the full instructions on the aerosol can.
- Remove ALL pets and children from the room.
- Remove or cover all aquatic life.
- Test on an inconspicuous area of material.
- Shake the can well before use.
- Hold the can about 30cm away from the area.
- Spray the entire floor area (and the walls up to 1 metre high).
- Pay particular attention to cracks, crevices, skirting boards and under furniture.
- We recommend leaving the area closed for two hours, and then ventilate for at least 30 minutes.
- Ensure all areas, materials and pet bedding treated are fully dry before reintroducing children and pets.

### AS WELL AS USING PDSA VET CARE ULTIMATE HOUSEHOLD FLEA SPRAY:

- Wash pet bedding on a high temperature 60°C.
- Turn the heating up to create a humid environment for eggs to hatch into larvae.
- Vacuum every day. Vacuuming not only helps remove flea eggs in the home, but it also encourages flea pupae to hatch.
- Allow pets normal access to rooms in the house to encourage fleas out of hiding.
- Re-spray the house regularly during an infestation – every two weeks to a month.
- Use a veterinary recommended flea product for all pets in the household.
- If you clean carpets or wash surfaces, you will need to retreat the area with the spray.
- A 10 second burst treats 1 square metre of surface. The 500ml can will be sufficient to treat a typical family home.

# ULTIMATE HOUSEHOLD FLEA SPRAY

ITCHY? UNCOMFORTABLE?  
THE FEELING OF UNWANTED VISITORS IN YOUR HOME?

# PDSA VET CARE ULTIMATE HOUSEHOLD FLEA SPRAY

A flea infestation can cause discomfort for everyone in the household and, what used to be very seasonal has become a year round problem due to a relatively mild climate and the use of central heating in our homes.

**DID YOU KNOW?**  
FLEA PUPAE CAN LAY DORMANT IN YOUR CARPETS AND FURNISHINGS FOR UP TO A YEAR

Our household flea spray combines three active ingredients to treat and break the flea lifecycle to provide long term and effective flea control in your home.

- Fast acting
- Long-lasting protection for up to 6 months
- Kills adult fleas, flea eggs and flea larvae
- Kills crawling pests such as cockroaches, ants and silverfish
- Ideal for use in the home

## TWO FAST ACTING INSECTICIDES

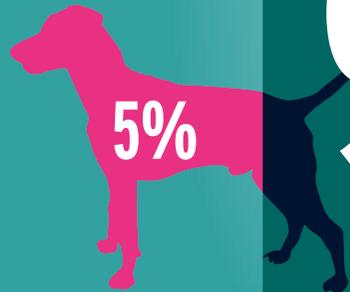

Pyrethrin and Permethrin, provide fast and effective control of adult fleas.

## AND AN INSECT GROWTH REGULATOR

S-methoprene is key to breaking the flea life cycle, preventing the development and growth of flea eggs and flea larvae in the home, for up to six months.

EACH SALE HELPS PDSA'S LIFE-SAVING CHARITY WORK

**DID YOU KNOW?**  
ONLY 5% OF A FLEA INFESTATION IS ON YOUR PET, 95% IS WITHIN YOUR HOME AS EGGS, LARVAE AND PUPAE

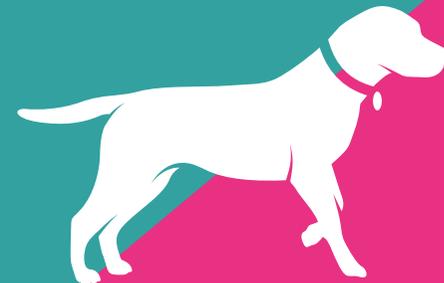

95%

Flea bites cause discomfort and irritation to both pets and people, with some pets developing allergic reactions to flea saliva.

Young puppies and kittens are at risk of anaemia from excessive flea's infestations, which can result in fatal consequences.

### Adult flea

Fleas jump onto our beloved pets to feed, with females laying eggs within the following 36 hours.

### Flea eggs

Will fall from your pet's coat around your home. Eggs will generally hatch into larvae after 5-10 days depending on temperature and humidity.

## THE FLEA LIFE CYCLE

### Flea larvae

The larvae avoid light, crawling deep into dark spaces whilst feeding on skin cells and flea dirt in the environment. This stage lasts 5-18 days, before they spin themselves into a cocoon called pupa.

### Flea pupae

Will lay dormant in an impenetrable cocoon until they sense a host (your pet). No chemicals can kill flea pupae.

**DID YOU KNOW?**  
ONE FEMALE ADULT FLEA CAN LAY UP TO 50 EGGS PER DAY OR 1,500 EGGS IN HER LIFETIME
