

# END 2 END TECHNOLOGIES

*Industrial Wireless Automation,  
Integration and Management*

## Custom Software Development for Industrial Wireless Communications

End 2 End Technologies (E2E) provides the breadth and depth of technical expertise required to create unique software solutions, ranging from single-purpose tools to comprehensive enterprise-level frameworks which you market under your own brand. Our custom software solutions are designed to provide seamless integration into your product line, with a consistent customer perception of your brand.

### Our Approach

We specialize in delivering software tools and systems that automate the management of your companies' industrial wireless communication networks. We utilize the latest software engineering principles and coding practices to produce business-ready software solutions. You avoid the cost and overhead of maintaining your own software development organization—effectively allowing you to focus on your primary business, while E2E becomes your virtual software development organization.

### The Development Team

Our team of developers has over one hundred years of combined experience developing industrial wireless automation software solutions for large and small enterprises using the latest processes and technology. Our list of software projects includes both business process automation and network/remote management software for the Oil and Gas, Power Utility, Water/Waste Water and Transportation industries.

### CUSTOMER BENEFITS

- Quick time to market
- Interoperable with existing software solutions
- Low total cost of ownership and reduced risk
- Flexible architecture
- Reliable and scalable systems for managing hundreds or thousands of devices
- Productized solution or customer hosting using a Software-as-a-Service (SaaS) model

### PROJECT TYPES

- Industrial wireless automation software
- Network management software
- Remote radio management software

## E2E SOLUTIONS

Our solutions cover the industrial wireless communications market end-to-end including:

- Wireless Network Engineering
- Wireless Equipment, License and Structure Procurement
- Field-Area Network Deployment
- Field-Area Network Monitoring & Management
- Custom Software Development

## GETTING STARTED

Tips on getting started with our custom software development:

- Contact E2E Software Services
- Engage in completely confidential fact-finding workshops
- Arrange for custom software services to begin building prototypes
- Validate software solutions against your specific equipment

## Software Support

All of our developed software includes support services for handling customer questions and issues, as well as providing software training and documentation. E2E is your complete end-to-end solution for software services.

## Go With an Experienced Team For Your Next Project

Why take on additional cost and risk of hiring and managing an internal team of experts that know software development and industrial wireless communications? End 2 End Technologies can be your virtual team of software and industry experts. Let us build a software solution to your specific requirements while you to focus on the core competencies of your business.
