# Quick installation guide of Eco PI Pro LP/HP   v1.0

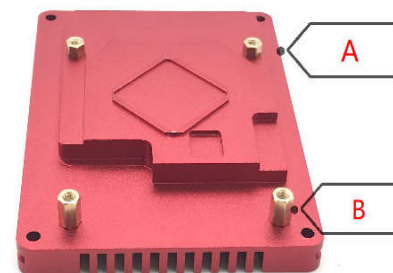

Step 1,

Remove the four screws to disassemble the heat sink.

Step 2,

Mount 2pcs of copper bolt A and 2pcs of copper

bolt B at the designated positions on the heat sink.

Put the heat conductive paste in the designated CPU space in the middle of the the heatsink.

(less is more – please only place a small drip in the center!)

Step 3,

Place the Rock PI board on the heat sink, adjust the holes

and fix it with 4pcs of screw C

Step 4,

Finish the assembly with placing

the cover on top and fix it with the

4 screws through the heat sink.

Finally use the 4 silicon feet and stick them next to the screws. The additional height

will support the air flow through the heat sink on the bottom.
