

## Flying Firefly, Model FMF-4.1, 4 Green LED's Assembly and Setup Instructions

### Description:

Our Flying Firefly, Model FMF-4.1 is product that comes with 4 (four) individual electronic 'Flying Fireflies', powered by a supplied 6 Volt wall adapter.

A small fan provides a mechanical motion that allows the fireflies to move and mimic a Flying Firefly.

### **Indoor Use Only.**

### Comes with:

- 4 – 'Flying Firefly' LEDs – **GREEN**
  - Flying Firefly black wire, each in lengths of about 50 inches
  - Rugged, UV-resistant black wires
- 1 - 35-foot UV resistant Power Wire (black color)
  - A cluster (control module black box) to control the flashing and flickering of the LED's
  - Easy to install eyelets for mounting (black color)
- 1 – 6 Volt wall adapter with a 6-foot-long cord (black color)
- This unit is a kitted product, stored in a plastic bag. A retail box is not included.

### Additional Flying Firefly information:

#### 1. Normal Operation:

- a. **Designed for Indoor Use Only.**
- b. Please review the attached drawings.
- c. This unit has 4 "hanging" LED fireflies from the power wire.
- d. Secure the power wire with the eyelets at a stable location (example: beams in the home, a covered backyard roof overhang, etc.).
- e. The eyelets are the round holes that are at the top of each flying firefly wire.
- f. Connect each firefly lead to the bottom of the eyelet area, following the direction of shapes (to verify you have inserted them properly). See the "detail drawing."
- g. The fan on each flying firefly, provides the mechanical motion of the firefly appearing to fly.
- h. **Outdoor Use is at your own risk.**
- i. Moisture (rain and or irrigation) is not ideal for this model due to the motorized parts, the fans. Keep away from water.
- j. When not in use for an extended period, it may be best to take the unit down (optional to leave the wire cable with the eyelets installed but remove and store the firefly leads and wall adapter).
- k. When installed in a perfect setting, this product truly looks like real fireflies flying around!

#### 2. Fly Distance:

- a. These 'Flying Fireflies' need an area of 20ft x 5ft to properly fly freely. When installing, allow for proper spacing for each of the fireflies, do not install them close together. The 5-foot area allows each 'Flying Firefly' to move around more freely and to not get tangled on each other, or items near it.
