A decision for quality.

As a German family-owned business from the Münster region, for over 60 years now we have dedicated ourselves to developing products that are sustainable and conducive to healthy living, while setting the highest standards in terms of function and aesthetics.

Taking nature as our example, we use our passion, expertise and flair for good design to create floors that bring together the latest designs and sophisticated technology combined with maximum resource efficiency for our shared environment.

*Wood/stone reproduction. Colour reproductions are not binding.

24 h water stop – fit for real life

Everyone knows the little mishaps of daily life. The glass of water that is knocked over, the dog running in from the garden with dirty paws, or the dripping raincoat after a walk in the rain — dureco is ideally prepared for these situations.

The SEAL technology protects the floor against water laying on the surface for a period of up to **24 hours**. It prevents

swelling and the appearance of the floor remains unaffected. Due to its robust wear layer and the ability to resist water, dureco meets almost every challenge of daily life without sacrificing any of its beauty. One thing less to worry about and more time for the important things in life.

24-hour water-stop protection – thanks to SEAL technology

1 SmartConnect Pro

SmartConnectPro is the quick and secure click connection for a lastingly beautiful floor. The special design of the profile reduces the penetration of liquids and provides additional moisture protection.

2 ExtremeDense

ExtremeDense is the name of the technology behind the extremely high-density wood-based baseboard — the heart of dureco floor. The wood fibres are compressed together so tightly as to provide maximum protection against moisture penetration.

3 AllroundSafe

AllroundSafe protects each individual plank with a special new formula for sealing the edges, to stop moisture on the surface and bevels before it can penetrate the interior of the floor.

4 LongLifeSurface

LongLifeSurface is the protective layer which is applied in several steps to the surface of the floor. The floor surface gains its durability and water resistance from the addition of the corundum, a natural mineral from the same family as sapphire.

Corundum is a natural and abundant mineral from the sapphire family. It has a value of 9 on the Mohs hardness scale*. Only diamond is harder, with a value of 10. The high degree of abrasion resistance and temperature stability make corundum the ideal component for everything that is subjected to stress.

(*A reference scale created by Friederich Mohs for determining the hardness of materials)

plastic free – a contribution to the climate

Our responsibility. For the dureco floor, we use wood from certified sustainable forestry. This is confirmed by the PEFC certificate, which all dureco floors have been awarded. The careful selection of the growing regions and the trees that grow there are crucial for the high quality standards of ter Hürne. The principle of sustainable economic and resource-saving trade is a fundamental part of our philosophy and extends to all areas and processes of our company.

In addition, a considerable part of the wood material used for baseboard production today is already manufactured from trees, which can no longer be used for furniture or hardwood flooring; for example, due to storm damage.

Your health is important to us

Health is our greatest asset. For this reason, we bear a great responsibility, because we create products you live with every day. They are an important part of your home, it's where you and your loved ones should feel well looked after. We at ter Hürne therefore attach the greatest importance to the fact that you and your family can live with our floors with confidence and being assured of natural healthy living. With a dureco floor you are making a good choice for your health.

*Information sur le niveau d'émission de substances volatiles dans l'air intérieur, présentant un risque de toxicité par inhalation, sur une échelle de classe allant de A+ (très faibles émissions) à C (fortes émissions).

1 Top Layer

Surface sealing wear layer made of a resin bond corundum coating.

2 Design layer

Decorative design layer made of wood fibre.

3 Baseboard

Baseboard made of wood fibre that is compressed into extremely high density.

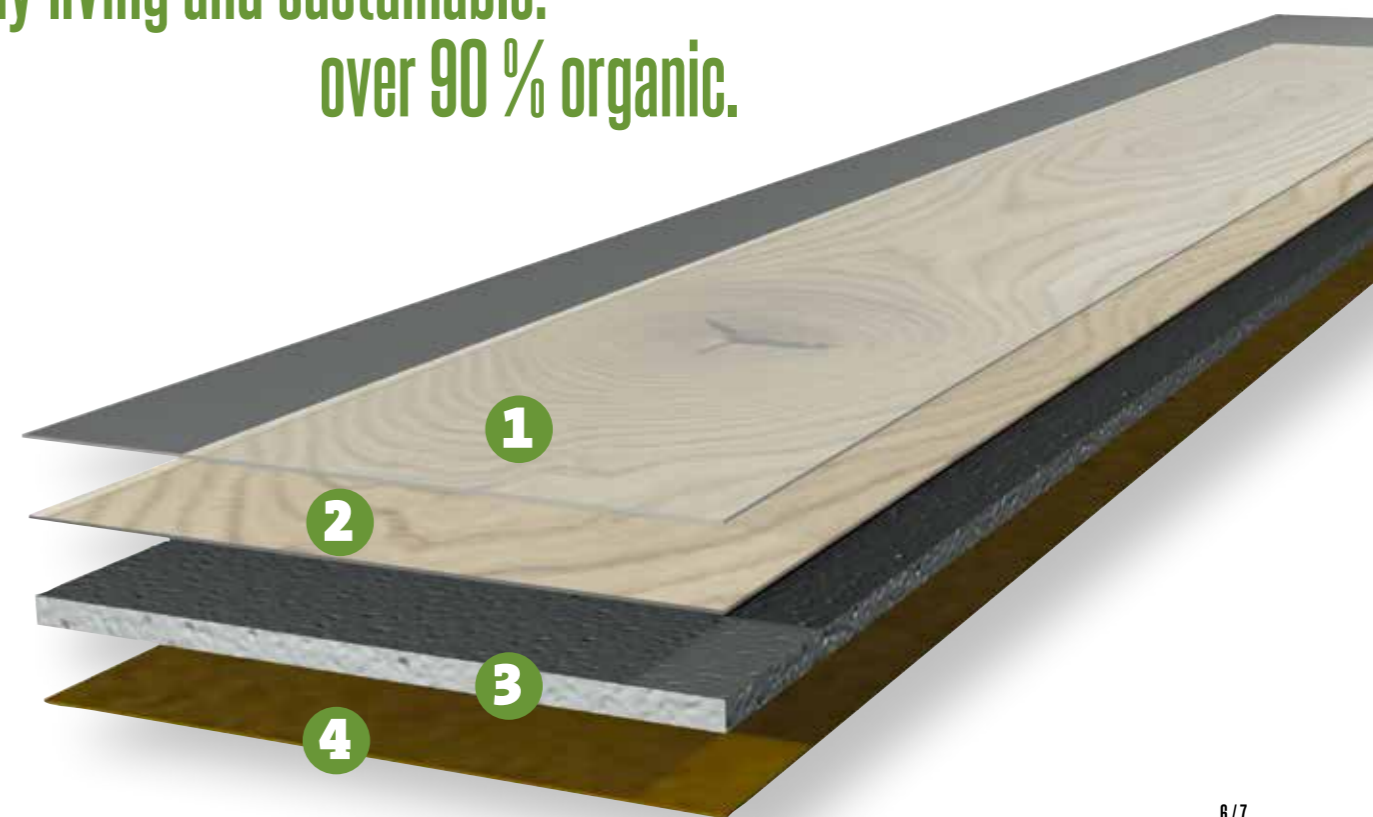

4 Backing layer

Stabilising layer made of wood pulp.

One **cubic metre of wood** stores one tonne of CO₂. By choosing a dureco floor, you are making an active contribution to climate protection, because our floor is mostly made of wood. The wood contained in the product stores the CO₂ absorbed by the tree right up until it is actually burned. Added to that, for every tree used for production, more trees will be planted, which in turn will store CO₂ during their lifetime. That is why we have given dureco the title of being a **climate-positive floor**.

**Healthy living and sustainable:
over 90 % organic.**

Technical properties

The appeal and colours of our dureco designs are the most visible signs of the ter Hürne quality standards. But behind them are even more remarkable characteristics that perfect the function of the floors.

Non-slip and flame resistant.

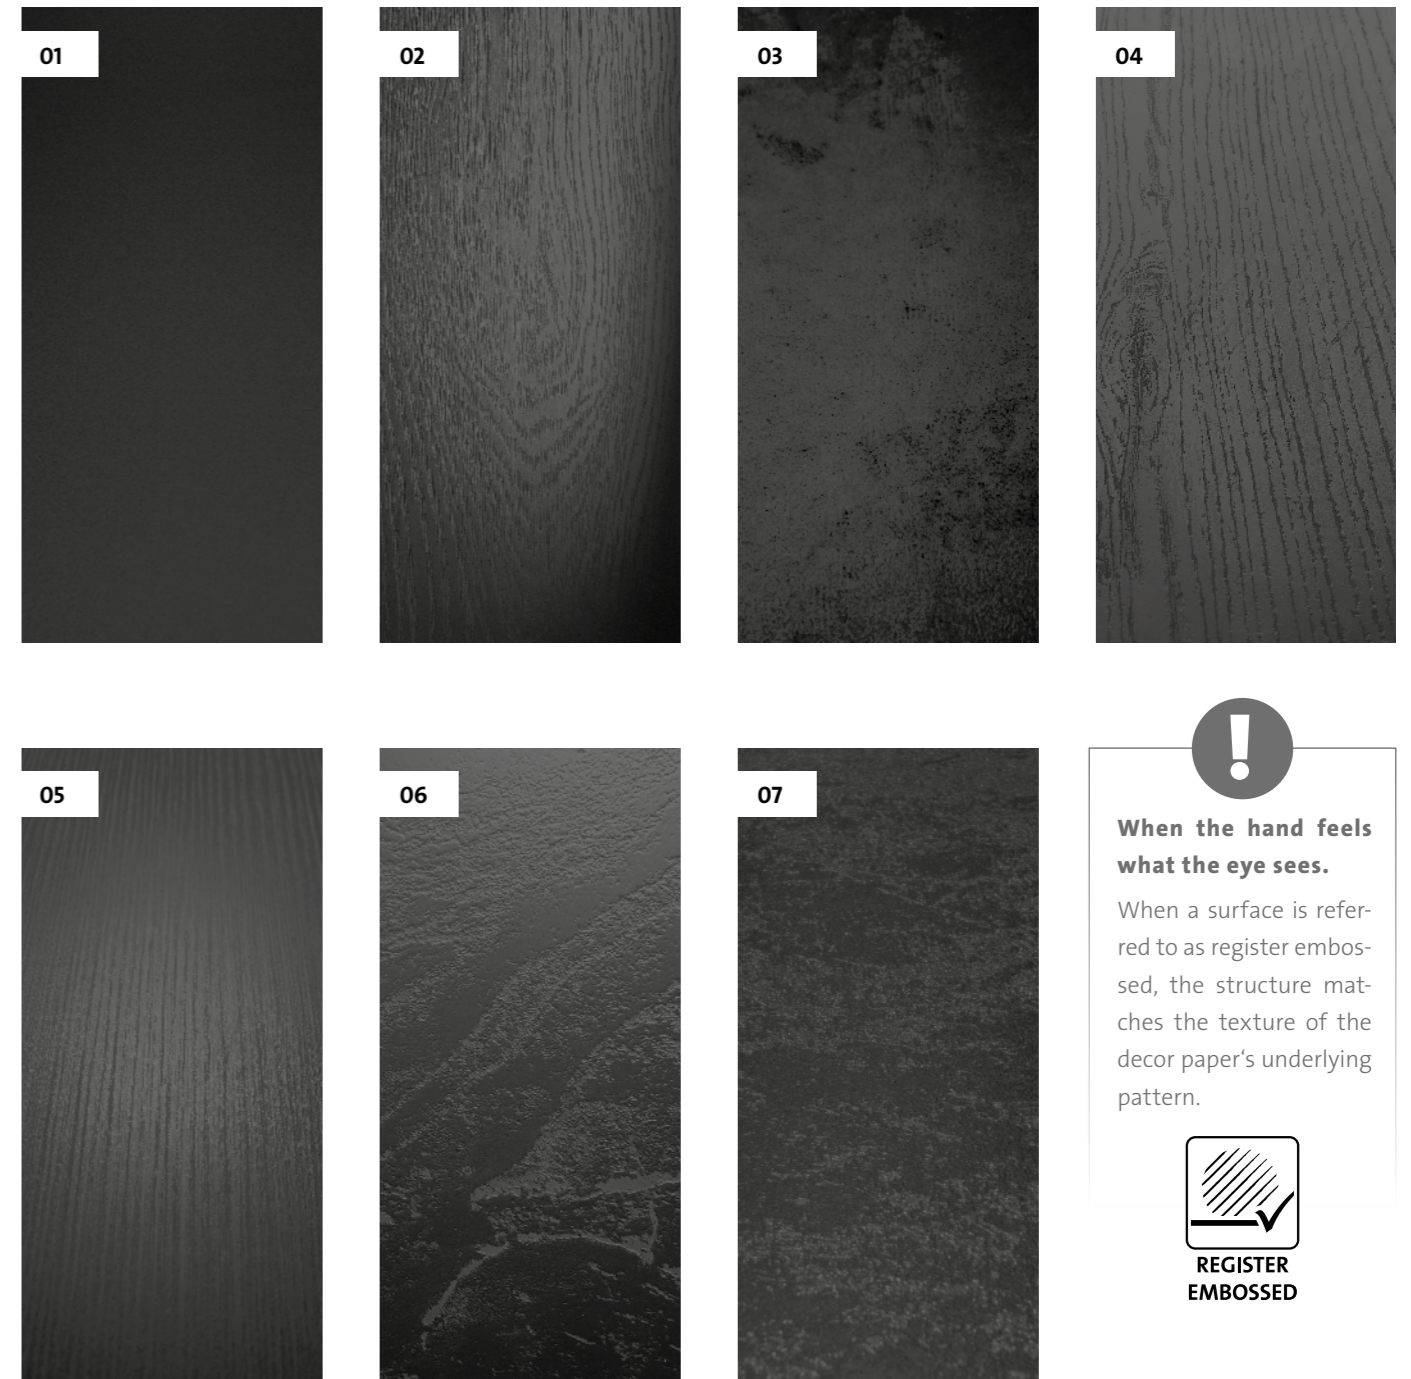

Surface structures

Seeing and feeling must be brought in line to create what is needed: a perfect combination in perfect harmony.

The ter Hürne dureco range features seven different surface structures which make the floor come alive and emphasise the effect of the decor in various ways.

- 01 Structure | smooth | matt
- 02 Register embossed | fine brushed | matt
- 03 Structure | fine pored | matt
- 04 Register embossed | fine brushed/sculptured | matt
- 05 Structure | linear brushed | matt
- 06 Register embossed | fine structured | matt
- 07 Structure | fine structured | matt

When the hand feels what the eye sees.

When a surface is referred to as register embossed, the structure matches the texture of the decor paper's underlying pattern.

REGISTER EMBOSSED

* For electric surface heating systems with gentle warm-up technology and temperature control unit.

Accessories — perfectly matched

Because your floor deserves it.

What constitutes a perfectly installed floor? On one hand, it looks beautiful and on the other — and you only notice this over time — it stands out due to its durability. To achieve this, what you mainly need are the right accessories — both before and after the installation. Our underlay material and care products are perfectly matched to the specifications of our floors, significantly increasing their durability, appearance and feel.

And with our functional transition profiles and decorative skirtings you will achieve the perfect finishing touches.
