GemCore™ by Reward Cleaning & Maintenance Instructions

12.01.17

1. Immediately after installation, the floor should be dry vacuumed to remove all dust and debris.
2. Then wipe with a vinyl flooring cleaner. Use any generic brand cleaner specifically made for cleaning vinyl flooring. Use a sponge mop or similar cloth-applicator mops. Be sure to follow the vinyl cleaner manufacturer's instructions.
3. After 5-10 minutes, the floor should be rinsed with a damp mop to remove all residue of the cleaning agent.
4. Allow the floor to dry for at least 30 minutes before walking on it.

IMPORTANT

- Always remove excess water as it may cause slip and fall hazards.
- Use soft cleaning towels to spread the cleanser and to clean afterwards. Do not use hard towels made from stiff natural fibers, microfiber, or other abrasive material.
- Do not use soap-based detergents, waxes, caustic cleaners or abrasive cleaners.
- Use non rubber backed floor protectors at entrances.
- Use felt protectors under the legs of furniture to help prevent scratches.

WEEKLY MAINTENANCE

Follow the same instructions as under "Initial care after installation".

PERIODIC MAINTENANCE

Depending on the amount of traffic on the floor, periodic maintenance might help to restore the floor's original beauty. Use any regular vinyl floor refresher (such as Bona Hard Floor Refresher) to do the job. Be sure to follow the vinyl floor refresher manufacturer's instructions.
