STYLE IS WHAT YOU MAKE IT
Getting from A to B doesn’t have to be predictable.

The Felt Fixed Gear Series is about function, but also about form. They will get you where you are going—swiftly and efficiently—but they also say a little something about your own personal style.

Take a close look and you’ll see that these bikes are direct descendants of our World Championship winning track-racing bikes. They share the same minimalist outlook. Both are characterized by bold racy lines and an unmistakable aesthetic that blends classic design with modern technology.

The 2013 Felt Fixed Gear Series includes the popular Brougham. Equal parts style and substance, the Brougham features a sleek custom-butted 4130 cromoly frame crafted with quick, agile track geometry, an oversized downtube, bladed aero seatstays, a trimmed handlebar and deep V-section wheels.

Additionally, the 2013 Fixed Gear line features the York—an all new offering from Felt that references old school British bicycles. Crafted from 4130 cromoly steel, the York blends traditional aesthetics with modern refinements for a very regal ride.

From elegant to edgy, minimalist to outrageous, Felt Fixed gears are for those who wish to follow their own path.
BROUGHAM

Single speed 4130 custom butted or m.o steel frame

100% m.o steel fork

17T freewheel and 17T fixed cog w/ lockring

Tektro brakes and brake levers, hi-flange hubs

w/ flip-flop rear hub

VERZA CITY SERIES

The heart of Verza City is its lightweight, durable 6061 butted aluminum frame. Felt engineers used this strong, lightweight material to craft a bike that blends the efficient ride quality of a road bike with the comfortable, more upright positioning that’s more commonly associated with mountain bikes.

Every Verza City has been specially designed with a “Verzatile” handle bar and highly adjustable stem for additional control and a wide variety of positioning options for different types of riders. All models come with a wide range of smooth-shifting gears, and either powerful disc or linear-pull brakes, which help Verza City riders tackle the steepest of streets.

The Verza City is available in three different models to suit all different types of riders. Every detail—from specially designed saddles to Felt ergo handlebar grips—has been carefully selected to match this bike’s versatile nature. Some models also include extras such as fenders and racks. No matter which Verza City bike you choose, you are going to get a fun and functional ride.

VERZA PATH SERIES

The Verza Path is designed to get you where you want to go comfortably and efficiently. Like the Verza City, the Verza Path is also built around the upright geometry that most recreational riders prefer. The Verza Path is built with a suspension fork that dampens road harshness and makes the ride nearly effortless. A multi-speed drivetrain allows for a comfortable cadence no matter the terrain.

The Verza Path’s aluminum frame offers both low weight and excellent durability, and a low standover height makes the bike easily manageable. Supple 700x38C tires deliver superior ride quality, and linear-pull brakes provide confident and powerful braking.

The Verza Path is offered in four different models—two men’s models and two women’s models—each of which is equipped with men’s and women’s specific saddles to ensure a comfortable ride. Each model is offered in four different sizes to accommodate riders of all heights. The result is a bike that’s inviting enough for casual neighborhood rides and also perfectly capable of turning up the speed.

VERZA REGENCY SERIES

Based on the traditional Dutch bikes that are popular throughout Europe, the Verza Regency delivers unparalleled comfort and style. The Verza Regency incorporates the same upright geometry and frame design that has been used in the Netherlands for decades, allowing for superior ride characteristics and a dapper appearance.

The Verza Regency is built around a lightweight and durable steel frame. The men’s frame features the conventional ‘gents’ design with a horizontal top tube, while the women’s frame features a step-through frame allowing for a low standover and easy mounts and dismounts.

Both the men’s and women’s models feature a reliable internal three speed transmission that minimizes maintenance and makes any hill a breeze to climb. A comfortable saddle, and sweeping handlebars let you pedal with ease.

Alloy rear rack, full coverage fenders
Handbrake, mounted cup holder, bell, adjustable two leg kickstand
You know what you want in a bike: comfort, classic styling and modern features. Together, these features make riding more enjoyable. What you don’t want are limitations—a bike that’s too focused on one specific purpose.

If that sounds familiar, you’re not alone. With all the different categories of bikes these days—road bikes, mountain bikes, city bikes, fitness bikes—a trip to the bike shop can be an overwhelming experience.

Enter the Felt Café. This is the bike that cuts through the clutter. Inspired by the smart, stylish bikes you see cruising the streets of Paris or Milan, Café is designed to fit your lifestyle.

Don’t be fooled by Café’s cool, understated aesthetic. Behind the seemingly effortless style is a calculated approach to performance and comfort. Felt conducted extensive market research to find out exactly what mattered most to people in search of the perfect do-it-all bike. We then passed those findings along to our team of engineers.

The first thing the engineers focused on was frame geometry. Getting the dimensions right was key to achieving great handling and comfort. Café designers understand that an overly aggressive, stretched out position isn’t necessary for this bike, but they also didn’t want to compromise ride quality and handling. They created a bike that’s comfortable and efficient, yet perfectly capable of accelerating or climbing hills without forcing you to stand up out of the saddle.

Every Café bike is built to be as light as possible for increased efficiency and a lively ride quality. The frames are constructed with lightweight aluminum featuring hydroformed tubes. And many parts and components—including forks, handlebars, stems, seatposts, cranks and wheels—are also made with lightweight, corrosion-resistant aluminum.

Going beyond the basics, all Café bikes are outfitted with accessories to help make the most of your ride. Puncture-resistant tires, aluminum kickstand, a lightweight aluminum cup holder and safety bell come standard with every Café bike. And the Deluxe models feature extras including a lightweight aluminum rear carrier rack, a removable rear clip-on saddlebag and lightweight fenders.

From urban commutes to weekend rides in the park, Café is the enjoyable new way to ride. Ditch the car and ride to work. Commit to daily rides to improve your health. Ride to the café. All these things are made easier and more fun with a bike built just for you.

You always know a Felt Cruiser when you see one. Whether it's our traditional 26" wheel cruiser or the new 29" big wheeled bikes, Felt stands above the rest. We've created new bikes with unique design and style that grabs attention. The 2013 Cruiser line has been updated to bring famous Felt styling, quality, and an attention to detail that is unique to Felt cruisers at all prices.

You're sure to find a unique Felt Cruiser that speaks to you. Whether it is the nostalgically-themed Deep Six, the all new 1909, the retro Felt Beaumont or the understated Bixby, there is a cruiser to match every personality.

Style may be the first thing you notice and like about a Felt Cruiser, but the ride quality is what you'll love. From high end frame materials to unique construction processes these bikes are built to be ridden and to last as durable classics.

Every Felt Cruiser is designed in-house or specially selected to fit the needs of a specific rider. Custom grips, a variety of forks, CNC-machined aluminum chain wheels, custom matched valve caps, saddlebags and embossed saddle covers; these are just some of the things you'll see that set Felt Cruisers apart.

Felt takes their classic attention to detail a step further with a new series of 29" wheel Cruisers. Our new 29" wheel Cruisers combine all of the style and function of our proven 26" wheel bikes along with the smooth rolling and higher stance of the bigger wheel. No matter what wheel size you choose, there is a Felt Cruiser perfect for you.

A specification highlight of the 29" Cruisers is the unique Sturmey Archer 2-speed kick-back rear hub. On the Burner and Rail models, you can use your brakes and shift gears with your feet—no hands required. No shifter cables means less service required while maintaining the clean, classic lines of your Felt Cruiser.

Felt Cruiser frames are built from either aluminum or hi-tensile steel. Our aluminum cruisers are light weight, never rust, and are perfect for the beach culture. The traditional hi-tensile steel frames deliver Felt Cruiser durability at a great value. Felt engineering allows us to interpret the classic curvaceous lines of the cruiser in two proven frame materials for wherever you ride your bike.

Whether you prefer 26 or 29 inch wheels, steel or aluminum, high-style or laid-back comfort, there is a Felt Cruiser perfect for your lifestyle.
