The all-new 2014 Felt AR redefines aerodynamics for road bikes.

Five years in the making, it is the most aerodynamic road bike in the world. No other road bike comes close. Evolved from the original, already best in class Felt AR, the all-new 2014 Felt AR Series adds new meaning to the term “aero.”

Every available technical resource, including the latest computational fluid dynamics, rapid prototyping, wind tunnel testing and real world testing was used to develop a road bike with drag numbers previously seen only on TT/Tri bikes. Without exaggeration, it is a bike that will change every aspect of road cycling.

How much more aerodynamic is the new Felt AR? Neutral wind tunnel testing proves that the 2014 AR is 14.7% faster than the previous Felt AR and 28.7-31.1% faster (contingent on front brake selection) than a round tube, baseline road bike. That is a quantifiable energy savings and time advantage that no other road bike can match.

The new Felt AR has all the superb ride characteristics desired in a road bike; optimized geometry, stiff, lively responsiveness out of the saddle with rail-like cornering and descending. With the new Felt AR you do not have to sacrifice weight, stiffness or ride quality to gain an aerodynamic advantage. Superior, world-class ride quality is combined with a previously unavailable aerodynamic advantage.

As you would expect with any Felt, each AR is outfitted with a full complement of race-ready components, all designed to deliver your best performance ever.
Aero Road UHC Ultimate + TeXtreme® MMC carbon frame and fork
Shimano Dura-Ace Di2 11-speed 53/39T x 12-25T w/ sprint shifters
VanMount Aero Road flip position carbon seatpost
Zipp 404 Firecrest wheels, Vittoria Diamante Pro Light tires
3T Torqoa LTD carbon handlebar, 3T Integra LTD carbon stem

The F Series is Felt’s lightest and stiffest road bike family. From the Grand Tours to World Championships, mountaintop finishes to high-speed bunch sprints, Felt’s performance F Series road bikes are engineered to win and have the race history to prove it. Whether it is the carbon fiber F1 raced by Marcel Kittel, John Degenkolb and Team Argos-Shimano or a quick, agile aluminum version, an F Series bike promises unmatched speed and world-class performance.

The Felt F Series features real world classic racing geometry: horizontal top tube, low head tube, sharp trail and tight wheelbase. Every dimension is optimized to produce race performance body positioning. Every F Series rider, no matter the price point, enjoys the same race-tuned responsiveness in and out of the saddle, climbing, cornering and sprinting.

Each F Series bike is equipped with carefully selected components designed to optimize performance while maintaining the pure race bred heritage these bikes have built their reputation on.

Get more acquainted with the podium this year. Get on a Felt F Series, and get used to winning.
Race Road UHC Advanced MMC carbon frame and fork
Shimano Ultegra Di2 11-speed 52/36T x 11-25T w/ sprint shifters

The Z Series is Felt's most versatile road bike family. Whether tackling a Gran Fondo or the Tour de France, the perfect bicycle is one that delivers quick, agile performance at any speed, and provides the compliance and fit necessary to make even the longest ride enjoyable. The 2014 Z Series is specifically designed to deliver just that: meld top-tier handling with all-day capability.

Felt Z frames use a slightly taller head tube for greater flexibility in stem and bar position, as well as overall rider compartment. They feature sloping top tubes for increased stand over clearance, and benefit from improved vertical compliance from an enhanced cockpit layout. The Felt Z uses a slightly longer wheelbase for confident handling at any speed. Design goals of the Z were simple: make a race ready bike without limiting rider position or all-day capability.

Whether you choose a Z model built from any of our premium-grade carbon fiber lay ups, or one of the lightweight aluminum models, you'll get the same proven handling and confidence inspiring performance.

The proven Felt Z will inspire and deliver you to new heights.

The ZW Series is a genuine woman-specific road bike series. As with all of our Fit Woman® products, the goal of Felt’s ZW was to address the specific needs of female cyclists from both an engineering and anatomical perspective, along with improving performance. Many manufacturers introduce women’s bikes by changing components and graphics to visually distinguish them from men’s models. Felt started the entire engineering process from scratch on the ZW series, from the carbon lay-up on up.

The ZW features a longer wheelbase for enhanced stability. There are more cockpit positioning choices. The sloping top tube provides superior stand-over clearance for climbing and sprinting with improved vertical compliance.

Those design features contribute to the ZW’s overall ride quality, but to truly optimize a bike for women, and to address every anatomical detail, every angle and dimension of the frame was scrutinized. Because a woman’s body has distinctly different proportions than a man’s, simply making a smaller frame is not an effective solution. Essentially, Felt reverse-engineered the geometry to achieve the desired fit. The ZW material lay-up is customized to improve performance and features such women-specific qualities as smaller diameter tubing, thinner tube walls and shorter frame intersections.

As with everything that Felt engineers, the ZW is focused on performance. Over the last three years, the ExergyTWELVE Pro Women’s Cycling Team has ridden the ZW to numerous victories in some of the most prestigious races in the world. The ZW is stiff enough for unfettered performance: light enough to fly over hills, and compliant enough to ride all day.

Finally there is a bike you can call your own: The Felt ZW Series.
ZW2

Fit Woman UHC Performance MMC carbon frame
and UHC Advanced carbon fork

Shimano Ultegra Di2 11-speed 50/34T x 11-28T w/ climbing shifter

MMC carbon frame and fork
COLOR: MATTE CARBON
innovative, aerodynamic, solo effort bikes. We have continually brought new ideas to rider positioning, efficiency and, above all, aerodynamics. From Champion triathletes like Mirinda Carfrae and Andi Boecherer, to Olympic and World Time Trial Champion Kristin Armstrong, they all rely on Felt time trial and triathlon bikes.

2014 marks a quantum leap in Felt’s TT/Tri offerings. With the addition of the new game-changing Felt IA—by far the fastest tri bike ever developed—Felt adds yet another chapter to its rich triathlon heritage. Built as a dedicated triathlon bike, unbound by road federation design limitations, the IA is a multisport purebred that includes every aerodynamic and mechanical advantage for tomorrow’s triathlete, today.

The 2014 TT/Triathlon line is the result of our never-ending commitment to design improvement. These bikes are our fastest and most advanced TT/Tri bikes ever. Each bike incorporates engineered tube shapes, highly advanced materials, and a host of revolutionary technology and design practices. Our engineering team uses powerful computational fluid dynamic software to develop designs in the virtual environment. From there we move to rapid prototyping, wind tunnel development, pre-production prototyping, and finally, real world testing. If at any point in the engineering process a new concept is not proven, we return to the previous step.

The genuine strength of Felt's TT/Tri Series is not just wind tunnel data. In addition to the verified lowest drag coefficients in the sport, our bikes have superior ride quality and handling. No matter what the terrain or course pavement is like, Felt’s TT and triathlon bikes provide a performance advantage with better frame stiffness and ride comfort.

Every Felt TT/Tri bike is outfitted with meticulously selected components, each chosen to offer the best performing, most aerodynamic bike in the world. On a Felt TT/Tri bike your bicycle is no longer an excuse; it’s an advantage.

In the purest of all cycling disciplines, Felt track bikes stand tall and alone. Ask 6x World Track Cycling Champion, Sarah Hammer and her teammates on the 2012 London Olympic medal-winning Team Pursuit squad. In the seven years since its introduction to the international racing community, Felt has become the most successful, most coveted track name available.

Just like our TT/Tri and AR lines, the category-leading Tk1 was engineered using powerful Computational Fluid Dynamic (CFD) software and extensive aerodynamic analysis. Once the materials were chosen, Felt engineers applied proven geometry to give the bike precise, track-specific handling. And, like all of our performance products, it is elite level athletes and competition that ultimately validate the final design.

Building a bike that can take the power output of a world-class sprinter and deliver the stability to handle G-forces from maintaining 40 MPH on a 45-degree bank requires the right engineering. That engineering is built into each Felt Tk bike.

Whether selecting from one of our two marquee Tk1 offerings—Sprint or Endurance—or our proprietary aluminum models, the proven, predictable race handling are all guaranteed. All Felt track bikes come ready to hit the banks with the right blend of components. Each features quality manufacturing like CNC machined dropouts and internally machined bottom bracket shells.

Find out why Felt track bikes have earned such a devoted following among a wide variety of fixed gear riders. Whether a World Champion or a Wednesday night local, Felt track bikes are the fastest way to slingshot to the finish.

Felt’s Fx line represents the pinnacle of cyclocross bicycle design. The unpredictable and constantly changing terrain in cyclocross puts a rider’s skills and their bike to the ultimate test. This unique sport requires a lightweight, high performance bike that stands up to the elements, no matter what they are, and excels in all punishing terrains.

The prerequisites to a superior ‘cross bike are well defined: it must handle with complete confidence in dirt, sand, mud and snow; it has to be a climbing lightweight; it must be capable of quick dismounts and remounts. It must also be as fast and agile as a road bike, and robust enough to handle the demands and abuse which comes with the sport.

The Fx line was built for the rigors of elite level cyclocross racing. All Felt cyclocross bikes benefit from the advanced engineering, materials and manufacturing processes of Felt’s latest generation road bikes. Top models feature full carbon fiber construction and blend the latest technologies with cyclocross-specific geometry. Their design details include optimized front and rear mud clearance, curved seatstays for additional ride comfort, and a flattened top tube underside for more comfortable shouldering during dismounts and run-ups. A BB30 bottom bracket, tapered headtube and full disc brake compatibility are details you find on this premium product line.

Whether you are shooting for a national title or just dabbling in ‘cross to improve your fitness, or even if you need a fast, quick-handling and durable bike for rides that take you off the pavement—there is a Felt Fx just for you.

The 100mm travel Edict Nine is a MTB cross-country purebred.

The Edict Nine is designed to tear through the toughest XC World Cup circuits and tame the most grueling marathon and XTERRA courses. The all-new 2014 Edict Nine Series brings a new level of performance to the gritty, unpredictable world of off-road riding and racing. Built with the World Championship proven Felt Active Stay Technology (FAST) and with efficient, stable 29" wheels, the carbon fiber Edict Nine is the new generation of XC racing. It is the favorite of the Kenda/Felt Pro MTB Team, Feenstra/Felt p/b Kenda Pro MTB Team and Josiah Middaugh, US National XTERRA Champion and silver medalist in the 2012 World XTERRA Championships.

The Edict Nine offers 100mm (4") of smooth, predictable travel and delivers unequaled suspension performance in a lightweight, race ready package. The genius behind FAST is its simplicity. The FAST seat stays and chain stays work as a single unit, offering just enough flex to optimize rear suspension activity. The whole rear end is custom engineered to provide both a stable pedaling platform and smooth trail feel. It keeps your tires on the ground when climbing and pedaling through stutter bumps. FAST suspension adds just the right amount of shock absorption and compliance to reduce fatigue even on your toughest rides.

All Edict models are lightweight, quick handling and stable. Now you can have the same off-road advantage our pros do: the Edict Nine.

The new 2014 Virtue Nine Series combines the agility and performance of a cross-country bike with the stability and control of an aggressive trail bike. The 130mm travel Virtue, now on 29" wheels, is a blend of versatility and performance unmatched in the industry.

The Virtue is a mainstay in the Felt line-up. It is built around Felt's award winning Equilink suspension system. Equilink provides optimal pedaling efficiency uphill and unmatched ride quality going down. The unique and patented suspension system affords full-range travel independent of drivetrain or braking influence. With the elimination of pedal feedback over stutter bumps your wheels stay fully engaged at all times. Even hard braking is optimized. Virtue Nine is a nimble design that will change the way you think of full suspension.

Each Virtue is built as light and torsionally stiff as possible while delivering precise and confident handling. All models use optimized rear shocks to keep the suspension lively and active. They are combined with the highest quality bearings, bushings and hardware. The result is a bike unmatched in the industry. The Virtue is simply one of the most confident and capable trail bikes ever.

With several all-new Virtue Nine models to choose from, including full carbon fiber and aluminum, there is an option for every rider and pocket book. Now you can ride any trail ever dreamed possible.

Ride Virtue Nine.

COLOR: MATTE CARBON
The Compulsion is the pinnacle of performance. Built around the patented and proven Equilink suspension, and 150-160mm of fully active adjustable travel, the Compulsion is an all-mountain masterpiece. On Compulsion, anything is possible: tackle all the steep stuff, up and down, like you never thought possible.

At the heart of the Compulsion is Felt’s Equilink suspension. The unique and patented Equilink system provides full-range travel independent of drivetrain and braking influence. Just like the Virtue, pedal jack is a thing of the past. Your wheels stay fully engaged even over stutter bumps. You’ll never have to feather the brakes so your suspension can work. The Equilink neutralizes negative forces so your suspension is in constant operation. Equilink eliminates the need for excessive compression damping that some bike makers use to mask their own suspension inefficiency. The result is uncompromising performance on an uncompromised bike.

With two models to choose from in 2014, one carbon fiber and one aluminum, the Compulsion is lighter, stronger and stiffer than ever. It is robust enough to take big hits, and agile enough to deliver high speed, rail-like performance. The Compulsion features premium quality links and hardware, honed pivot placement and workload-specific tube shapes with optimized geometry. Cartridge bearings ensure butter smooth suspension travel. Precision pivot axles provide necessary durability and strength.

Whether its chairlift runs, enduros or a little of everything, Compulsion puts the “all” in all-mountain.

- Shimano XT hydraulic disc brakes
- Wheels: DT Swiss 240s 14x110mm Boost
- Color: Brushbrite
With cutting-edge frame technology and superior ride quality that has won over Felt’s professional cross-country racers, Felt’s Nine Series blends the surefooted handling characteristics of 29” wheels with race-bred performance. The Nine is our ultimate racing lightweight.

Since first introducing the Nine hardtails over six years ago, Felt has earned the reputation for “getting it right” among the most elite mountain bike riders. Getting the characteristics of a 29” hardtail exactly right in rider cockpit, weight distribution and center of gravity is difficult with bigger wheels and on smaller frames. This is where the Nine excels. Felt Nine provides no-compromise fit and performance, no matter which Nine model you are on.

Our Nine design criteria has remained clear: from geometry, to tube shapes, to rear triangle design, the Nine emerges in 2014 faster and more efficient than ever. Available in five sizes, the Nine is now a bike that fits one of the widest ranges of riders.

Top Nine models use Felt’s proprietary Modular Monocoque Construction (MMC) carbon fiber for world-class ride quality and performance. These models provide the perfect blend of lightweight liveliness and durability. Our aluminum models have the same quick handling and compliant ride. They are built to climb and handle just like their carbon fiber counterparts.

So whether a World Cup XC pro or XTERRA devotee, a Marathon specialist or a recreational rider, there is a 2014 Felt Nine that is just right for you.

New for 2014 is Felt’s 7 Series. Using Felt’s tried-and-true hardtail design expertise including what it takes to deliver spot-on geometry no matter the circumstance, these new 27.5” wheel bikes are destined to make each mountain bike ride your best ever.

The family of Felt 7’s begins with our precision TIG welded, 6061 heat-treated aluminum frame with 3D forged dropouts, double water bottle braze-ons and cold forged aluminum replaceable rear dropout. Each Felt 7 also includes our ControlTaper 1.125-1.5” headtube and BB30 bottom bracket. These lightweight 7-specific frames carry all the performance of Felt MTB’s including generous tire clearance, dialed-in geometry and the handling that comes with just the right balance in stiffness and compliance. No matter the price points, every Felt 7 is outfitted with the best available components including 100mm travel suspension forks, reliable disc brakes, wide gear-ranges and precise-shifting drive trains.

All the unique features of the Felt 7 add up to a bike that is equally at home on the steepest of climbs, fastest of fire roads and quickest of singletrack.

The 2014 Felt Q Kids combines real-world performance and everyday affordability into a single mountain bike developed specifically for young riders. Designed to be fully capable off-road machines and built in two versions, the Q Kids is a young rider’s ticket to mountain bike adventure. Using tried and true geometry, Q Series bikes exhibit superb, predictable handling and lightweight ride characteristics. The Q Kids is perfect for open fire roads and challenging singletrack. It is built with the comfortable riding position and neutral geometry that deliver a complete off-road experience. Both the 26” and 24” Q series frames use premium 6061-aluminum tubing with specially shaped designs for maximum torsional stiffness and vertical compliance. Felt uses a modern dynaforming process to shape the tubes for minimal weight and bold styling. Versatile frame features such as rack and fender mount braze-ons, plus sturdy 3D cold-forged dropouts, are included. Every Q features wide-range gearing with flawless shifting, and suspension forks that perform like those often found on bikes costing considerably more. Every model uses components that are carefully selected to be proportionally sized for each frame. With Q Kids, mountain bike riding is now a complete family experience.

### Geometry

- Small: geometry for smaller riders, providing a more compact and efficient ride.
- Medium: geometry for riders of average size, offering a balanced comfort and performance.
- Large: geometry for larger riders, providing more stability and support.
- XL: extra-large geometry, for the most demanding riders.

### Specifications

- **Stack**: Vertical distance from the top of the head to the bottom of the seat post.
- **Reach**: Horizontal distance from the center of the bottom bracket to the center of the seat post.
- **Rake**: Angle between the top tube and the horizontal plane.
- **Wheelbase**: Distance between the rear axle and the front of the bicycle.
