KEEP YOUR FIRE PIT SMOKELESS

To keep your fire pit burning efficiently, it is necessary to remove built up ash covering the X Airflow® system and vents. This will ensure that incoming air is able to enter your fire pit for continued smokeless performance.

HOW TO USE

STEP 1

Ensure your fire pit and coals are completely cool before using your ash shovel.

STEP 2

Using the front tip of the shovel, drag around the circumference of the fire pit between the wall and the X Airflow system to push ash towards the center.

STEP 3

Shovel ash out from the wall towards the center and along the X Airflow system.

Repeat several times on all four sides of the X Airflow system, until vents are clear.

Ash Shovel around X Airflow system

WARNING

Always practice safety first when using the Breeo® Ash Shovel.

When using your Breeo Ash Shovel, exercise the same precautions with any open fire.

Never leave your Breeo Ash Shovel unattended, especially around children and pets. Ash Shovel may have sharp edges.

DO NOT put ashes into paper bags or trash cans while embers are still burning.
