

## HOW TO MEASURE FOR SHADES

First, select your favorite style shade, then choose an **inside** or **outside** mount.

*Each shade reaches 64" in length when fully extended. Full window coverage requires that your window length measurement not exceed 64" long.*

### Inside Mount

Shades are mounted inside of your window frame. They have a visually appealing clean look and will showcase your window molding. Allow at least a 3" depth from your wall to your window's glass for shades to fit properly.

#### Width

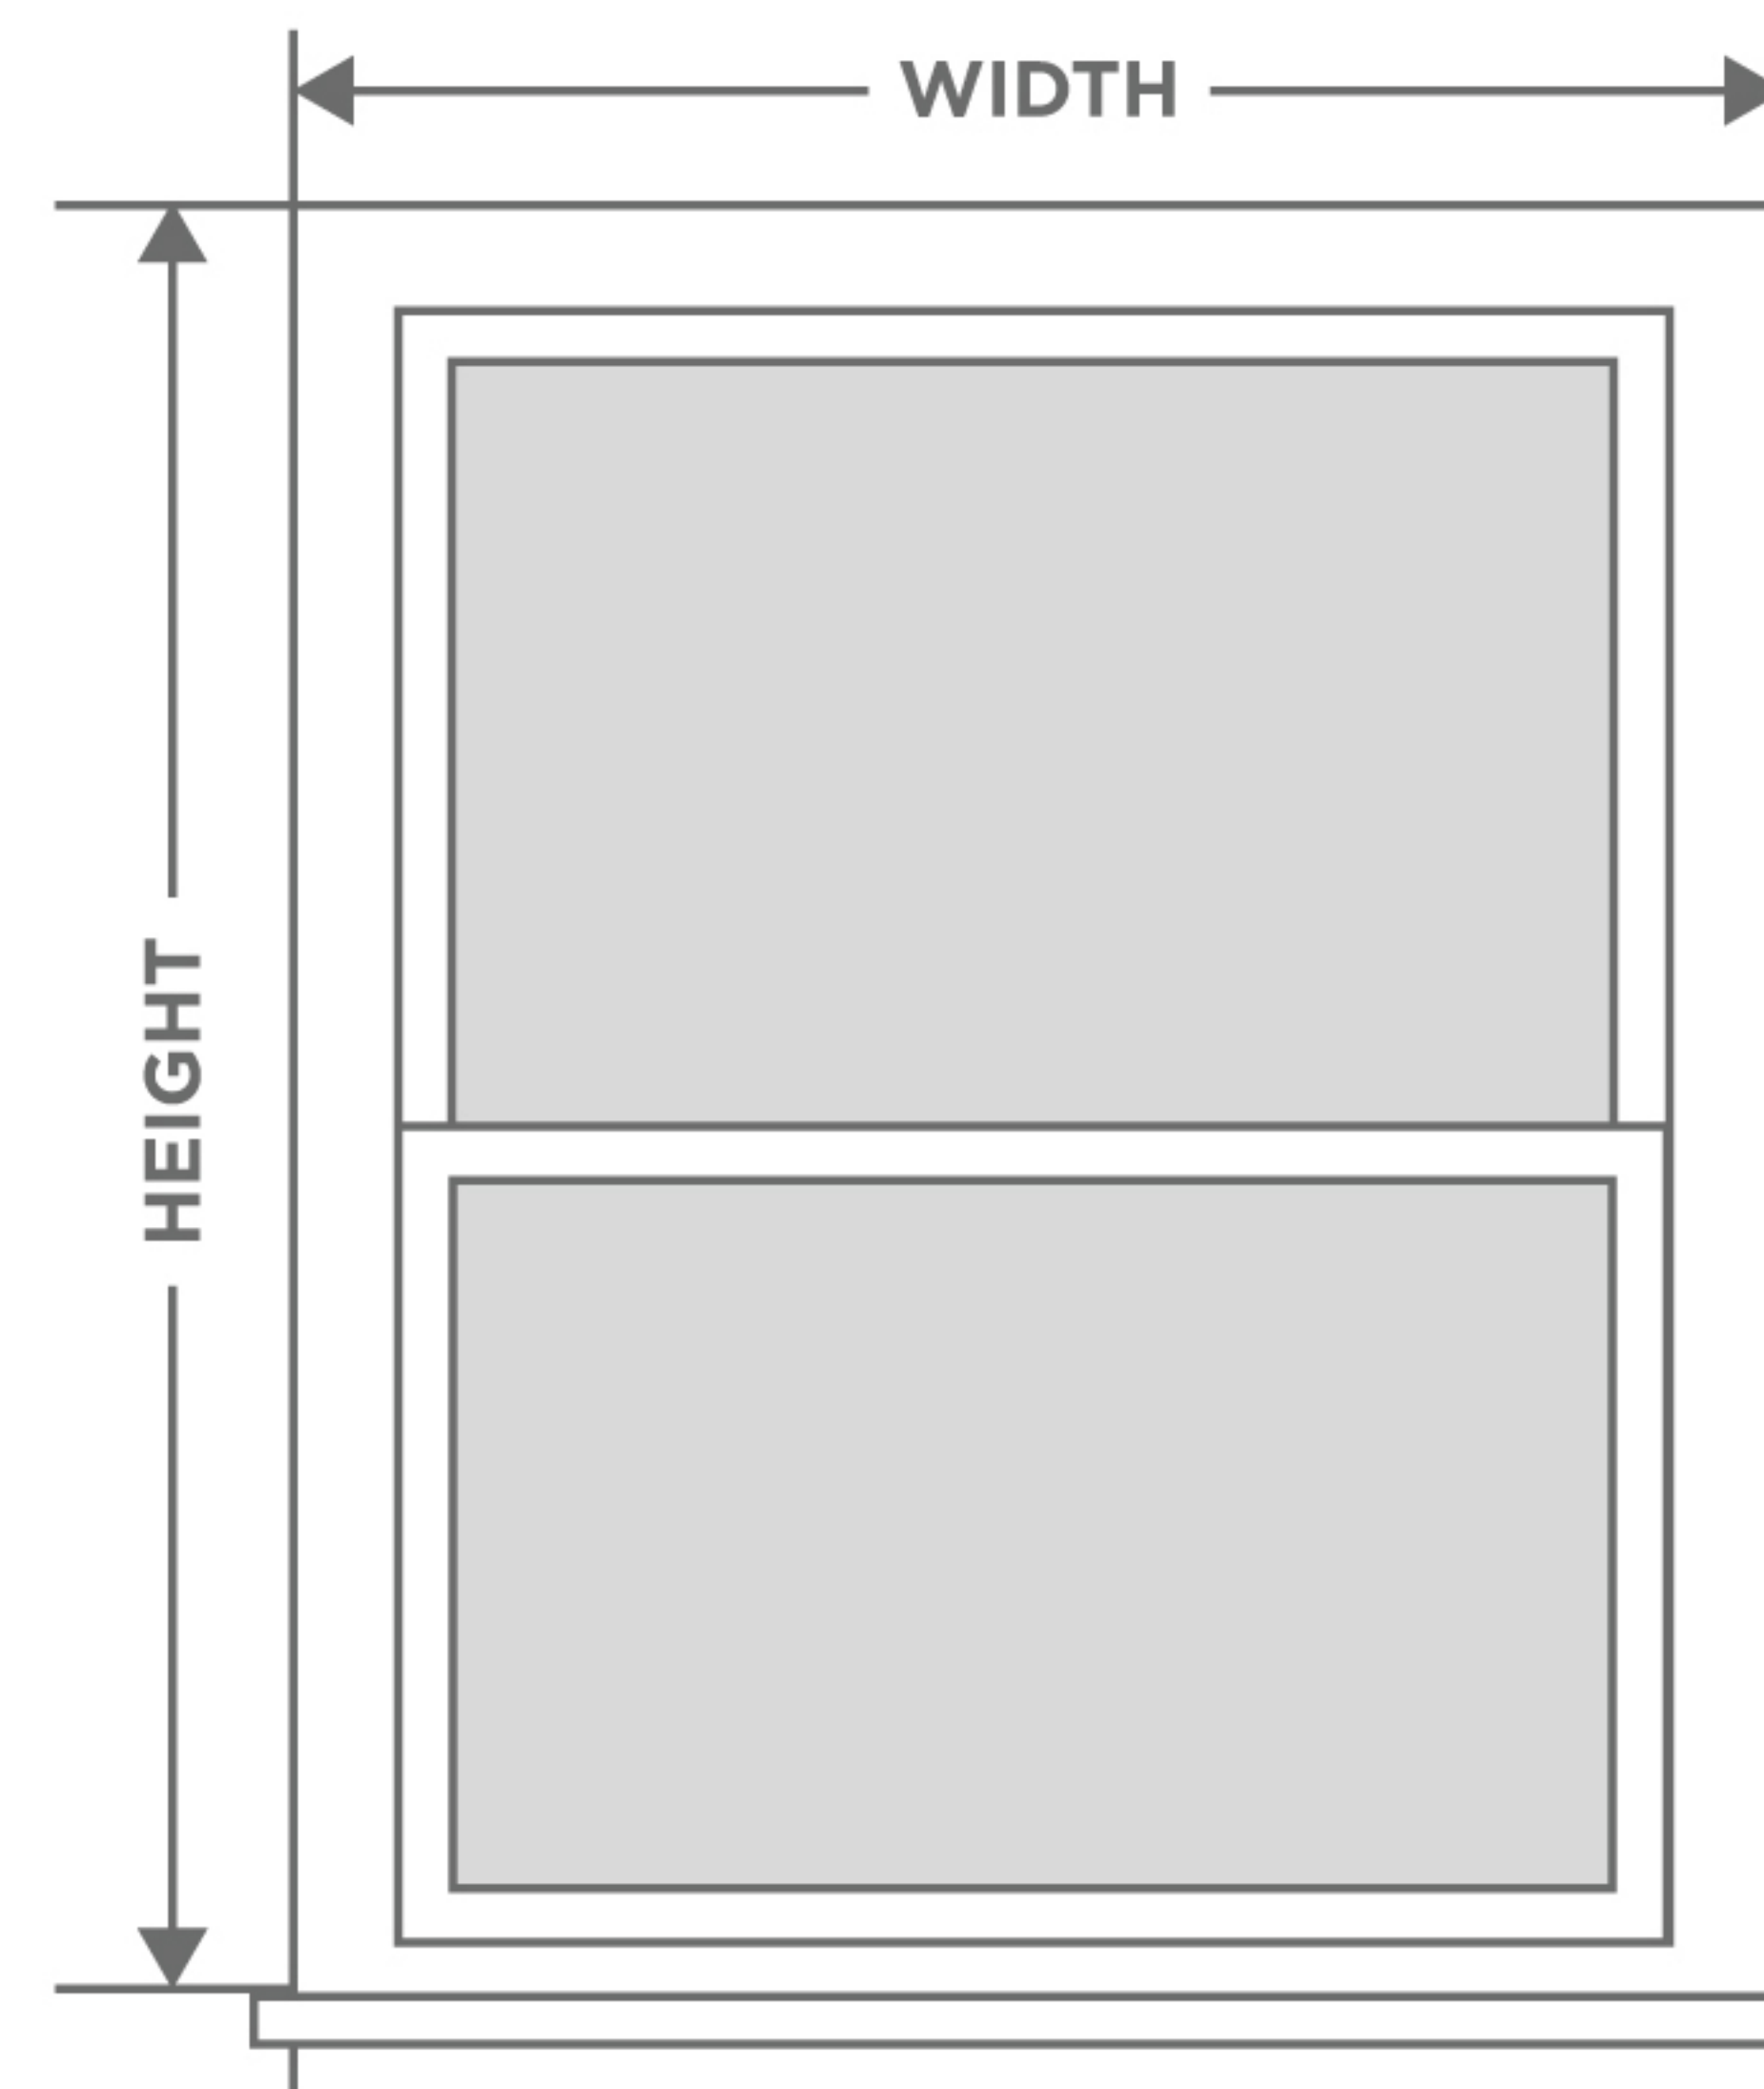

- 1 Measure the width at three places of the window opening (top, middle and bottom) using a steel tape measure
- 2 Round each measurement to the nearest 1/8" and use the **narrowest measurement**

#### Height

- 3 Measure the height at three places of the window opening from the top of window to the sill (left, middle and right)
- 4 Round each measurement to the nearest 1/8" and use the **longest measurement**

### Outside Mount

Shades are mounted on the window molding or on the wall above the window frame. Shades extend past the window frame and provide superior light control and privacy.

#### Width

- 1 Measure the overall area to be covered and add 3-4" in width (1-1/2" per side)
- 2 Round measurement to the nearest 1/8"

#### Height

- 3 Measure the distance where the top of the shade will be located to the top of window sill; if shade is to overlap the window frame, measure to the point shade should reach
- 4 Round measurement to the nearest 1/8"; if mounting on the wall, mount at least 1-3" above the window frame on a smooth, flat surface
