# THE GALEN

## 5 Function ICU Bed

The chances of injury are greatly reduced. This will reduce any additional strain on the body while getting up from the bed. The treatment charges as well as the prolonged stay in the hospital due to falling patients will be an added cost to the hospital. In India, the average height of the female patient is 5.2 feet (1.5m), having a low height of the bed will serve as an added advantage for easy accessibility.
