FRAME SIZE CHART

## What is the right frame size for my face?

If you already have frames you like, then you can match them to a size we have. Frame size information is normally printed on the arms of your glasses, with 3 numbers. First is the lens diameter, then bridge width, lastly the arm length. The frame size information for each of our styles is next to each image.

## Understanding Frame Measurements

Maxwell Frames // Day Lens

FRAME SIZE: 49-19-145

SIZE: 49-19-145

LENS WIDTH  
49mm

SIZE: 49-19-145

BRIDGE  
19mm

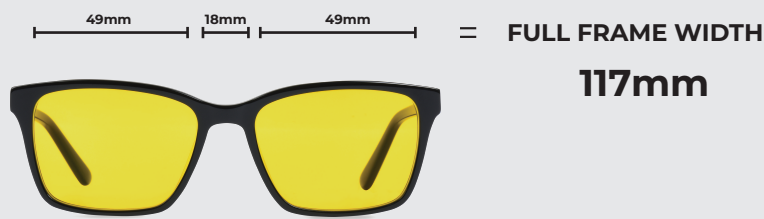

SIZE: 49-19-145

ARM LENGTH  
145mm

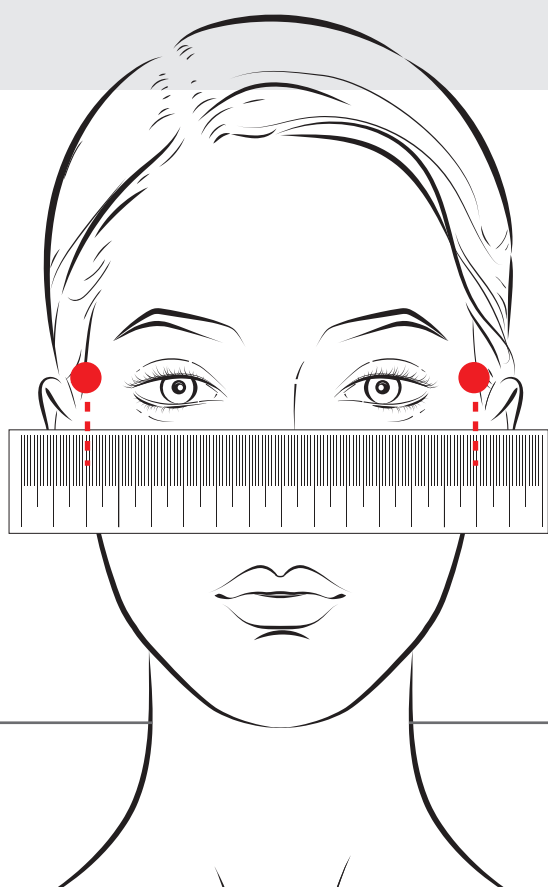

## The Most Important Measurement To Know

If you don't know the frame sizes, the most important measurement to consider is the full frame width – lens diameter + bridge width.

## Using a ruler, here are the steps to calculate this measurement:

1. In front of a mirror, hold the ruler in line with your temple
2. Measure the distance between your temples in inches
3. Multiply the measured value by 25.4 to convert from inches to millimetres (mm)
4. Now with your total width measurement, simply choose a frame size that is closest, +/- 3mm

## SIZE CHART

Frames are listed from smallest to largest.

Frames are the same size for day and night lenses

### Fritz

Size: 46-16-145

Total width: 108mm

DAY LENS

NIGHT LENS

### Clyde

Size: 47-19-145

Total width: 113mm

### Wallace

Size: 48-20-140

Total width: 116mm

### Nate

Size: 49-19-145

Total width: 117mm

### Popp

Size: 51-16-145

Total width: 118mm

### Maxwell

Size: 55-17-145

Total width: 127mm

KIDS

### Quantum

Size: 47-15-130

Total width: 109mm

KIDS

### Photon

Size: 48-16-130

Total width: 112mm

KIDS

### Spectral

Size: 47-15-130

Total width: 109mm

## We want you to be happy....and look great!

If the frame doesn't look right or you just aren't happy with the fit, we offer a hassle-free, return or exchange, within 30 days of receipt. If this happens, just let us know at [support@raoptics.com](mailto:support@raoptics.com) and we'll make it right for you!
