GEM-ZYME

Emulsion Remover Concentrate

General Description

Gem-Zyme is designed for the removal of all photo polymer, diazo, and capillary film emulsions. Gem-Zyme will immediately liquify and break down the emulsion and dramatically increase the speed of the reclaim procedure.

Contains natural enzymes to help degrade the emulsion

Advantages

- Easy To Use
- Immediately Breaks Down Emulsion
- Low Odor
- Safe On All Types Of Mesh
- Biodegradable / Drain Safe
- Concentrated
- Ideal For Dip Tank Applications
- Multiple Applications

Quick Tip:

Use an emulsion remover that has plenty strength to break down the emulsion.

Emulsions, that are not properly broken down, will leave excessive residue on the mesh.

Applications

Gem-Zyme can be used in concentrated form, or it can be diluted up to 1 to 20 parts of water.

Step 1. After removal of ink, block-out, and tape, apply Gem-Zyme to a wet screen(both sides).

Step 2. Scrub screen with non-abrasive pad or brush.

Step 3. High pressure rinse - starting at bottom.

Dip Tank Application

Add Gem-Zyme to Dip Tank and fill with appropriate amount of water. UP TO 20 PARTS WATER. Place screens in dip tank and let dwell for a few minutes. Only let screens soak until emulsion is soft enough to be rinsed off. Emulsion should not come off in dip tank.

Sizes Available:

Pint	Gallon	5 Gallon Pail	
Quart	4 x 1 Gallon	30 Gallon Drum	55 Gallon Drum

DST-1 Polyethylene Dip Tank
