### Leading Veterinary Equine Supplements

## Synovium® Agility

No.1 Veterinary Joint Supplement for Horses. Synovium® Agility is an innovative joint supplement containing 100% Bioactive Collagen Peptides (BCP®) which are specific, highly purified hydrolysed collagen peptides.

A natural protein that contributes to the maintenance of cartilage, joint mobility and muscle strength.

Collagen is the main structural protein found in connective tissues of the body (skin, bone, cartilage, tendon, ligament, blood vessels, hair). Clinical trials have demonstrated that supplementing horses with Bioactive Collagen Peptides (BCP®) improves joint immobility and supports healthy cartilage and muscle structure. Rapidly absorbed by horses for the best results.

Based on current evidence Bioactive Collagen Peptides® (BCP®) when given orally has beneficial support for Osteoarthritis in horses and can help improve and maintain joint health. Which contributes towards preserving mobility and performance.

Bioactive Collagen Peptides® (BCP®) is able to help slow down the progression of Osteoarthritis (OA) and help break the harsh cycle of joint degeneration.

All horses will feel the benefit from Synovium® Agility, from foals to seniors.

### Composition

100% Pure Bioactive Collagen Peptides (BCP®)

Synovium® Agility has a neutral taste and odour for fussy eaters.

### Feeding

\*\* 1 scoop = 14g
